

YieldMax™ R2000 0DTE Covered Call Strategy ETF (RDY)

(the "Fund")

listed on The Nasdaq Stock Market, LLC

March 4, 2025

**Supplement to the Prospectus
and Statement of Additional Information ("SAI"),
each dated February 4, 2025, and
the Summary Prospectus dated February 11, 2025**

The Fund's name has been changed to YieldMax™ R2000 0DTE Covered Call Strategy ETF.

Accordingly, effective immediately, all references to the Fund's name in the Summary Prospectus, Prospectus and SAI are deleted and replaced with "YieldMax™ R2000 0DTE Covered Call Strategy ETF."

Please retain this Supplement for future reference.

YieldMax™ Russell 2000 0DTE Covered Call Strategy ETF
Trading Symbol: RDTY
Listed on The Nasdaq Stock Market, LLC
Summary Prospectus
February 11, 2025
www.yieldmaxetfs.com

Before you invest, you may want to review the YieldMax™ Russell 2000 0DTE Covered Call Strategy ETF (the “Fund”) statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated February 4, 2025 are incorporated by reference into this Summary Prospectus. You can find the Fund’s statutory prospectus, statement of additional information, reports to shareholders, and other information about the Fund online at www.yieldmaxetfs.com. You can also get this information at no cost by calling at (866) 864-3968 or by sending an e-mail request to info@yieldmaxetfs.com.

Investment Objective

The Fund’s primary investment objective is to seek current income. The Fund’s secondary objective is to seek capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.02%
Total Annual Fund Operating Expenses	1.01%

⁽¹⁾ The Fund’s adviser will pay, all of the Fund’s expenses, except for the following: advisory fees interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the “1940 Act”), and litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$103	\$322

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks income and capital appreciation. The Fund seeks to achieve its investment objective by employing a synthetic covered call strategy, designed to generate current income on a weekly basis while

also providing exposure to the price return of the Russell 2000 Index (the “Index”) (described more below). In executing this strategy, the Fund will utilize call options that reference the Index or on passively managed ETFs that seek to track the Index’s performance (“Index ETFs”). Additionally, the Fund will invest in short-term U.S. Treasury securities and money market funds to enhance income from uninvested cash.

Call Option Strategy

The Fund’s synthetic covered call strategy involves a combination of selling and purchasing call options on the Index or on one or more Index ETFs. Each business day, typically at market open or shortly thereafter, the Fund sells out-of-the-money (OTM) call options on the Index (or Index ETFs) with zero days to expiration (“0DTE”) meaning these options expire at the end of the same day they are sold. OTM options are those with a strike price above the current value of the Index. The Fund, as the option seller, receives a premium (payment from the buyer) in exchange for the option, which provides income to the Fund. When the Fund sells call options, it receives a premium, thereby generating income, but limits its potential upside from increases in the market value of the underlying asset to the sum of the option’s exercise price and the premium received. Accordingly, the Fund’s strategy generates consistent income but caps the Fund’s ability to fully participate in market gains above the exercise price.

To establish synthetic long exposure to the Index, the Fund also purchases deep-in-the-money (ITM) call options on the Index (or Index ETFs). Deep-ITM call options are those where the current Index level is substantially above the strike price, providing the Fund with price exposure to the Index’s returns, similar to owning the Index’s securities directly. This is because Deep-ITM options have a price that moves nearly one-for-one with the Index due to their high intrinsic value, effectively mirroring the Index’s performance. This synthetic structure—combining sold call options for income with purchased calls for Index exposure—characterizes the strategy as a “synthetic covered call,” as opposed to a traditional covered call, where a security is owned outright.

Income and Indirect Participation in Index Performance

The Fund’s income is primarily generated by selling out-of-the-money 0DTE call options on a daily basis. The premium received from these call options contributes to the Fund’s income, but this approach may cap the Fund’s participation in potential Index gains. Specifically, if the Index appreciates beyond the strike price of the sold call options, the positions will limit the Fund’s potential upside, offsetting the gains from its long Index exposure. For example, excluding the premium from the sold call, if the Fund sells call options 1% out-of-the-money and the Index appreciates by 3% on a given day, the Fund’s net return will be 1%. This is equal to the 3% gain from its long call exposure, reduced by the 2% loss on its sold call options.

This strategy effectively converts a portion of the potential growth in the Index’s price return into current income, balancing income generation with limited exposure to the Index’s upside. Conversely, if the Index declines, the premiums earned on sold call options may partially offset losses from the Fund’s synthetic long position.

FLEX Options and European-Style Index Options

The Fund’s investment in options includes both standard exchange-traded options and FLEXible Exchange® options (“FLEX Options”), which allow for customization of key terms such as strike price, expiration date, and exercise style. Both exchange-traded options and FLEX Options are listed on regulated U.S. exchanges and are guaranteed for settlement by the Options Clearing Corporation (OCC), which mitigates counterparty risk. The options utilized by the Fund are index options and are cash-settled, “European-style” options, meaning they can only be exercised at expiration (in contrast to “American-style” options, which can be exercised at any time before expiration).

Distribution Policy

The Fund will seek to provide weekly income in the form of cash distributions. The Fund will seek to generate such income in the following two ways:

- Writing (selling) call option contracts on the Index (or Index ETFs) as described above.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.

Additional Fund Attributes

The Fund will invest at least 80% of its net assets, plus any borrowings for investment purposes, in 0DTE options contracts that use the Index as the reference asset.

The Fund is classified as a “non-diversified” investment company under the 1940 Act, which means that the Fund may invest a high percentage of its assets in a fewer number of issuers.

The Fund's investment exposure will be concentrated in (or substantially exposed to) the same industry or group of industries to the extent the Index is so concentrated.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

None of the Fund, the Trust, the Adviser, or their respective affiliates makes any representation to you as to the performance of the Index.

THE FUND, TRUST AND ADVISER, ARE NOT AFFILIATED WITH, NOR ENDORSED BY, THE INDEX.

Index Overview: The Russell 2000 Index is a widely recognized benchmark index that tracks the performance of approximately 2000 small-cap companies in the United States. These are the smallest companies listed in the Russell 3000 Index, representing about 10% of that index's total market capitalization.

The Russell 2000 is diversified and includes companies from various sectors such as financial services, healthcare, technology, consumer discretionary, industrials, and others. The exact distribution can fluctuate over time due to market conditions.

In terms of volatility, the Russell 2000, being a small-cap index, tends to be more volatile than large-cap indices like the S&P 500 or the Nasdaq 100. Small-cap stocks can be more sensitive to changes in the economic climate and can experience larger price swings. Notable periods of volatility have included the dot-com bubble burst in 2000, the financial crisis in 2008, and the market turmoil caused by the COVID-19 pandemic in 2020. However, as with any index, the specific level of volatility can change based on broader market conditions.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which they appear.

Referenced Index Risk. The Fund invests in options contracts that are based on the value of the Index (or in ETFs that track the Index's performance). This subjects the Fund to certain of the same risks as if it owned shares of companies that comprised the Index or an ETF that tracks the Index, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of the Index, the Fund may also be subject to the following risks:

Indirect Investment Risk. The Index is not affiliated with the Trust, the Fund, the Adviser, or their respective affiliates and is not involved with this offering in any way. Investors in the Fund will not have the right to receive dividends or other distributions or any other rights with respect to the companies that comprise the Index but will be subject to declines in the performance of the Index. However, the effect of dividends is indirectly reflected in the Fund's strategy, as dividends paid by the Index's component securities are incorporated into the pricing of the options used for synthetic tracking.

Index Trading Risk. The trading price of the Index may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of companies.

Russell 2000 Index Risks: The Index, which consists of small-cap U.S. companies, is particularly susceptible to economic changes, as these firms often have less financial resilience than larger companies. Market volatility can disproportionately affect these smaller businesses, leading to significant price swings. Additionally, these companies are often more exposed to specific industry risks and have less diverse revenue streams. They can also be more vulnerable to changes in domestic regulatory or policy environments.

Covered Call Strategy Risk. When the Fund sells call options, it receives cash but limits its opportunity to profit from an increase in the market value of the underlying asset to the exercise price (plus the premium received). The maximum potential gain on the underlying asset will be equal to the difference between the exercise price and the purchase price of the reference asset at the time the option is written, plus the premium received. In a rising market, the option may require an underlying asset to be sold at an exercise price that is lower than would be received if the underlying asset was sold at the market price. If a call expires, the Fund realizes a gain in the amount of the premium received, but because there may have been a decline (unrealized loss) in the market value of the reference asset during

the option period, the loss realized may exceed such gain. If the underlying asset declines by more than the option premium the Fund receives, there will be a loss on the overall position.

Additionally, because the Fund engages in daily sales of 0DTE options (zero days to expiration), the Fund may experience heightened volatility and rapid loss realization if market movements cause the sold options to be exercised before the end of the day, creating short-term losses that may affect daily returns. By selling out-of-the-money call options, the Fund's upside potential is further limited, as any gains in the Index's value beyond the strike price of the sold calls may result in losses on these positions, reducing potential gains from the Fund's synthetic exposure. While the premiums generated provide income, they may not fully protect against losses if the Index declines significantly. The deep-in-the-money calls used for synthetic exposure may not offer the same performance as directly holding the Index, leading to potential tracking issues where the Fund's returns may diverge from the Index's daily movements.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts, including deep-in-the-money ("deep ITM") and 0DTE options, involves investment strategies and risks that differ significantly from those associated with ordinary portfolio securities transactions. Options prices are highly volatile and influenced by multiple factors, including changes in the value of the underlying index or instrument, actual or implied volatility, time remaining until expiration, interest rates, fiscal and monetary policies, and national and international political or economic events. For the Fund, the value of the options contracts in which it invests is substantially influenced by the value of the Index and the unique characteristics of deep ITM and 0DTE options. While deep ITM options generally have a high delta, meaning their value moves almost in tandem with the underlying Index, prior to expiration, their price may not fully replicate the rate of change of the underlying instrument, leading to tracking differences. Additionally, 0DTE options are particularly sensitive to intraday price movements and volatility, which can exacerbate price swings and increase the risk of loss.

The Fund may experience substantial downside risk from certain options positions, including the potential for purchased options to expire worthless, resulting in the loss of premiums paid. Additionally, selling (writing) options exposes the Fund to significant risks that can exceed the premiums received. When writing call options, the Fund faces the risk of unlimited losses if the Index rises significantly, as it may be required to pay the difference between the strike price and the higher market value of the Index. Conversely, writing put options can lead to substantial losses if the Index declines significantly, as the Fund may be obligated to pay the difference between the strike price and the lower market value of the Index. These risks are heightened with 0DTE options, as their sensitivity to intraday price movements and volatility can lead to sudden and extreme losses within a single trading day.

The Fund may also encounter challenges in managing written options positions, particularly in volatile or illiquid markets, where closing or adjusting positions may be difficult or costly. Additionally, the process of rolling options positions—replacing expiring options with new contracts to maintain exposure—can involve significant transaction costs and expose the Fund to additional risks, such as adverse price movements during the roll period or reduced liquidity in the desired contracts. The Fund may also face margin requirements associated with written options, which could require the Fund to liquidate other assets to meet these obligations, potentially at unfavorable prices. Collectively, these risks may result in significant losses or reduced investment efficiency for the Fund.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to

the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current weekly income. There is no assurance that the Fund will make a distribution in any given week. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, weekly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date on which one needs to own a dividend-paying stock in order to receive the upcoming dividend payment). The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Concentration Risk. The Fund's investment exposure will be concentrated in (or substantially exposed to) the same industry or group of industries to the extent the Index is so concentrated. In such event, the value of Shares may rise and fall more than the value of shares that invest in securities of companies in a broader range of industries.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as The Nasdaq Stock Market, LLC. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock

exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

Small-Capitalization Investing. The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to mid- and large-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund, Adviser, seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the “Adviser”) serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

The Fund's income is primarily derived from its covered call strategy and the frequent trading of ODTE options, which typically generates short-term capital gains. These gains are treated as ordinary income for tax purposes and are taxed at the investor's marginal tax rate. When the Fund uses options that qualify as Section 1256 contracts, such as broad-based index options, the Fund's distributions may benefit from a 60 percent long-term and 40 percent short-term treatment. This can lead to more favorable tax outcomes for Fund investors compared to funds using options on single stocks or ETFs. The Fund's strategy is not expected to produce qualified dividend income, as the Fund does not directly hold the underlying securities of the index.

Distributions on investments made through tax-deferred arrangements such as IRAs, 401(k)s, or other retirement accounts will not be subject to immediate taxation but may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information
