What were the Fund costs for the past year?

(based on a hypothetical \$10,000 investment)

| Fund Name | Costs of a \$10,000 investment | Costs paid as a percentage of a \$10,000 investment |
|---|--------------------------------|---|
| YieldMax™ Short N100 Option Income Strategy ETF | \$21 | 0.99% |

The Fund commenced operations on August 14, 2024. Expenses for a full reporting period would be higher than the figures shown.

The Fund's past performance is not a good indicator of how the Fund will perform in the future. The graph and table do not reflect the deduction of taxes that a shareholder would pay on fund distributions or redemption of fund shares.

How did the Fund perform last year and what affected its performance?

YQQQ is part of the inverse YieldMax™ lineup that looks to be positioned synthetically short the underlying QQQ security while selling covered puts and/or covered put spreads.

The Fund benefits when QQQ's share price decreases, generates extrinsic premiums via option selling available as a distribution to investors, and has upside risk of the underlying.

During the reporting period, the Fund generated slightly negative total returns while paying out substantial monthly dividends.

Selling covered puts or covered put spreads allowed the Fund to capture extrinsic time value available for distribution to shareholders while offering a portion of the downside capture.

It is worth noting that the Fund was not live for the entire reporting period.

What Factors Influenced Performance?

When the underlying moves higher, it can create losses for this inverse ETF.

The implied volatility of the underlying index plays a significant role in the amount of extrinsic premiums that can be paid by the Fund. During the reporting period, the underlying QQQ mixed implied volatility with just having missed the August 5th spike and market downturn.

As a rule, the higher the implied volatility, the higher the option premiums available for sale and distribution.

Since the Fund has upside risk of the underlying, taking in premiums helps offset negative moves where an investor in the Fund would potentially expect to lose less over a period.

Conversely, investors may give up a portion of the downside which is an expected trade-off in exchange from capturing option premiums.

This is a summary of certain changes to the Fund. For more complete information, you may review the Fund's Prospectus.

How has the Fund changed?

Effective September 6, 2024, the Fund will at times opportunistically sell a credit call spread (described below) instead of selling a call option (i.e., the standard strategy) when ZEGA Financial, LLC (the Sub-Adviser) believes doing so will be more advantageous to the Fund's total return.
