YieldMax™ BABA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the ADR of Alibaba Group Holding Limited ("BABA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses (includes dividend, tax and broker expense) ⁽²⁾	0.08%
Total Annual Fund Operating Expenses	<u>1.07%</u>

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$109	\$340

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. For the fiscal period from August 7, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 16% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of the ADR of BABA (NYSE: BABA) ("BABA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to BABA regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of BABA, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of BABA increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of BABA,

- current income from the option premiums, and
- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of BABA.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to BABA equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to BABA.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Alibaba Group Holding Limited (“BABA”)

BABA is an e-commerce company that operates retail websites and offers programs that enable third-parties to sell products on their websites. BABA is listed on the New York Stock Exchange.

The American Depositary Share of Alibaba Group Holding Limited (BABA) is registered under the Securities Exchange Act of 1933, as amended (the “Exchange Act”). Information provided to or filed with the SEC by BABA pursuant to the Exchange Act can be located by reference to SEC file number 001-36614 through the SEC’s website at www.sec.gov. In addition, information regarding BABA may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of BABA or other securities of BABA. The Fund has derived all disclosures contained in this document regarding BABA from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to BABA. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding BABA is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of BABA (and therefore the price of BABA at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning BABA could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of BABA.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH ALIBABA GROUP HOLDING LIMITED.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to BABA. As of the date of the Prospectus, BABA is assigned to the broadline retail industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

BABA Risk. The Fund invests in options contracts that are based on the value of BABA. This subjects the Fund to certain of the same risks as if it owned shares of BABA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of BABA, the Fund may also be subject to the following risks:

Indirect Investment in BABA Risk. BABA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of BABA but will be exposed to the performance of BABA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

BABA Trading Risk. The trading price of BABA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of BABA may be traded by short sellers which may put pressure on the supply and demand for the common stock of BABA, further influencing volatility in its market price. Public perception and other factors outside of the control of BABA may additionally impact BABA's stock price due to BABA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against BABA in the past. While BABA continues to defend such actions, any judgment against BABA, or any future stockholder litigation could result in substantial costs and a diversion of the management of BABA's attention and resources. If BABA trading is halted, trading in Shares of the BABA Fund may be impacted, either temporarily or indefinitely.

BABA Performance Risk. BABA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of BABA to decline. BABA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance BABA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If BABA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by BABA could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as BABA, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in BABA, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, BABA, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not BABA itself. Though contractual agreements enable BABA to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by BABA's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like BABA, including their overseas listings and fundraisings. Other challenges include maintaining the

trusted status of BABA's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations. Furthermore, BABA's dependence on Alipay for payment processing and escrow services, its broad exposure to evolving laws and regulations, and the potential misuse or disclosure of data also represent significant business and industry risks.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a

broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Foreign Investment Risk. Because the Fund has indirect exposure to the ADR of a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Depository Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have only a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

Information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ CVNA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of Carvana Co. ("CVNA" or "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of CVNA (NYSE Arca: CVNA) ("CVNA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to CVNA regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of CVNA, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of CVNA increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of CVNA,
- current income from the option premiums, and

- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of CVNA.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to CVNA equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to CVNA.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

CARVANA CO. (“CVNA”)

CVNA is a leading e-commerce platform for buying and selling used cars. CVNA is listed on the New York Stock Exchange (“NYSE”). Per CVNA’s most recent Form 10-K filing, the aggregate market value of common stock held by non-affiliates of CVNA (based on the last reported sale price of its class A common stock on June 30, 2024, on the NYSE) was approximately \$14.7 billion.

CVNA is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by CVNA pursuant to the Exchange Act can be located by reference to the SEC file number 001-38073 through the SEC’s website at www.sec.gov. In addition, information regarding CVNA may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of CVNA or other securities of CVNA. The Fund has derived all disclosures contained in this document regarding CVNA from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to CVNA. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding CVNA is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of CVNA (and therefore the price of CVNA at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning CVNA could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of CVNA.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH CARVANA CO.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to CVNA. As of the date of the Prospectus, CVNA is assigned to the specialty retail industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

CVNA Risk. The Fund invests in options contracts that are based on the value of CVNA. This subjects the Fund to certain of the same risks as if it owned shares of CVNA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of CVNA, the Fund may also be subject to the following risks:

Indirect Investment in CVNA Risk. CVNA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of CVNA but will be exposed to the performance of CVNA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

CVNA Trading Risk. The trading price of CVNA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of CVNA may be traded by short sellers which may put pressure on the supply and demand for the common stock of CVNA, further influencing volatility in its market price. Public perception and other factors outside of the control of CVNA may additionally impact CVNA's stock price due to CVNA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against CVNA in the past. While CVNA continues to defend such actions, any judgment against CVNA, or any future stockholder litigation could result in substantial costs and a diversion of the management of CVNA's attention and resources. If CVNA trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

CVNA Performance Risk. CVNA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of CVNA to decline. CVNA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance CVNA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If CVNA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by CVNA could decline significantly.

Automotive Industry Risk. The automotive retail industry is subject to significant risks that can impact both profitability and competitiveness. The industry is highly dependent on consumer demand, which can be influenced by various factors such as economic conditions, consumer confidence, fuel prices, and preferences for particular vehicle types. Economic downturns or decreases in consumer spending can lead to reduced vehicle sales, impacting the profitability of automotive retailers. Effective inventory management is essential to avoid excess holding costs, obsolescence, and missed sales opportunities. Additionally, the industry's reliance on auto lending and financing means that changes in interest rates, lending standards, and credit availability can greatly influence consumer purchasing behavior. Regulatory compliance is another crucial aspect, as automotive retailers must adhere to various consumer protection, advertising, financing, and environmental standards, with non-compliance resulting in substantial fines, legal costs, and reputational damage.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular,

the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract’s expiration date affects the impact of the potential options contract income on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund’s investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund’s NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund’s call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund’s returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund’s participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund’s participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund’s performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund’s investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused

by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying

Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ DKNG Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of DraftKings Inc. ("DKNG" or "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of DKNG (Nasdaq: DKNG) ("DKNG" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to DKNG regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of DKNG, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of DKNG increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of DKNG,
- current income from the option premiums, and

- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of DKNG.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to DKNG equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to DKNG.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

DraftKings Inc. (“DKNG”)

DKNG is a digital sports entertainment and gaming company. DKNG provides users with online sports betting, online casino, and daily fantasy sports product offerings, as well as retail sportsbook, media and other consumer product offerings. DKNG is also involved in the design and development of sports betting and casino gaming software for online and retail sportsbooks and iGaming operators. DKNG is listed on The Nasdaq Stock Market LLC (“Nasdaq”). Per DKNG’s most recent Form 10-K filing, the aggregate market value of the voting and non-voting common equity held by non-affiliates of DKNG (based on the last reported sale price of its class A common stock on June 28, 2024, on Nasdaq) was approximately \$16.6 billion.

DKNG is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by DKNG pursuant to the Exchange Act can be located by reference to SEC file number 001-41379 through the SEC’s website at www.sec.gov. In addition, information regarding DKNG may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of DKNG or other securities of DKNG. The Fund has derived all disclosures contained in this document regarding DKNG from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to DKNG. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding DKNG is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of DKNG (and therefore the price of DKNG at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning DKNG could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of DKNG.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH DRAFTKINGS INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to DKNG. As of the date of the Prospectus, DKNG is assigned to the hotels, restaurants & leisure industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

DKNG Risk. The Fund invests in options contracts that are based on the value of DKNG. This subjects the Fund to certain of the same risks as if it owned shares of DKNG, even though it does not. By virtue of the Fund’s investments in options contracts that are based on the value of DKNG, the Fund may also be subject to the following risks:

Indirect Investment in DKNG Risk. DKNG is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of DKNG but will be exposed to the performance of DKNG (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

DKNG Trading Risk. The trading price of DKNG may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of DKNG may be traded by short sellers which may put pressure on the supply and demand for the common stock of DKNG, further influencing volatility in its market price. Public perception and other factors outside of the control of DKNG may additionally impact DKNG’s stock price due to DKNG garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company’s securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against DKNG in the past. While DKNG continues to defend such actions, any judgment against DKNG, or any future stockholder litigation could result in substantial costs and a diversion of the management of DKNG’s attention and resources. If DKNG trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

DKNG Performance Risk. DKNG may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of DKNG to decline. DKNG provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance DKNG provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If DKNG’s guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by DKNG could decline significantly.

Gaming Industry Risk. The global gaming industry faces intense competition from alternative entertainment options such as television, movies, and sporting events, potentially reducing the popularity of gaming offerings. Success in sports betting and iGaming depends on factors beyond DKNG’s control, including sport outcomes, which can impact product performance. Additionally, partnerships with casinos, tribes, and horse-tracks are crucial for offering gaming products in specific jurisdictions, and failure to establish or manage these partnerships could hinder DKNG’s gaming business. Moreover, growth prospects are contingent upon the uncertain legalization status of real-money gaming, which may face regulatory restrictions or delays, affecting gaming operations. Obtaining and maintaining gaming licenses in multiple jurisdictions is vital for business growth, and failure to do so could impair DKNG’s ability to operate gaming platforms. Negative events or media coverage related to gaming, such as sports betting and iGaming, could also adversely affect user engagement and acquisition, potentially impacting gaming revenues.

General Risks. Economic downturns or reductions in discretionary consumer spending could adversely affect DKNG’s gaming revenue, as gaming relies heavily on consumer spending. Risks associated with information technology systems, including failures, errors, or disruptions, pose a threat to DKNG’s brand and reputation, as well as disrupting gaming operations. Despite security measures, DKNG’s IT infrastructure is vulnerable to cyberattacks or breaches, potentially compromising user data and damaging reputation. Operating in a complex regulatory environment exposes DKNG to legal and regulatory risks, with changes in laws or regulations potentially impacting gaming operations and expansion plans. Investing in or acquiring other gaming businesses poses integration risks, affecting DKNG’s overall performance. Being subject to taxation in multiple jurisdictions exposes DKNG to additional tax liabilities due to changes in tax laws or interpretations, affecting financial performance. The company’s stock price may experience volatility, risking potential loss for investors due to fluctuations in

market conditions. Additionally, as a controlled company, shareholders may lack certain corporate governance protections, potentially impacting investor confidence.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts

is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ HOOD Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the Robinhood Markets, Inc. ("HOOD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

(1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

(2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of HOOD (Nasdaq: HOOD) ("HOOD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to HOOD regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of HOOD, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of HOOD increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of HOOD,
- current income from the option premiums, and

- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of HOOD.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to HOOD equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to HOOD.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Robinhood Markets, Inc. (“HOOD”)

HOOD is a financial services company known for its commission-free trading software application that allows users to invest in stocks, ETFs, options, and cryptocurrencies. HOOD is listed on the Nasdaq Stock Market (“Nasdaq”). Per HOOD’s most recent Form 10-K filing, the aggregate market value of the voting and non-voting common stock held by non-affiliates of HOOD (based on the last reported sale price of its class A common stock on June 30, 2024, on the Nasdaq Global Select Market) was approximately \$16.3 billion.

HOOD is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by HOOD pursuant to the Exchange Act can be located by reference to SEC file number 001-40691 through the SEC’s website at www.sec.gov. In addition, information regarding HOOD may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of HOOD or other securities of HOOD. The Fund has derived all disclosures contained in this document regarding HOOD from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to HOOD. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding HOOD is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of HOOD (and therefore the price of HOOD at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning HOOD could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of HOOD.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH ROBINHOOD MARKETS, INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to HOOD. As of the date of the Prospectus, HOOD is assigned to the capital markets industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

HOOD Risk. The Fund invests in options contracts that are based on the value of HOOD. This subjects the Fund to certain of the same risks as if it owned shares of HOOD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of HOOD, the Fund may also be subject to the following risks:

Indirect Investment in HOOD Risk. HOOD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of HOOD but will be exposed to the performance of HOOD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

HOOD Trading Risk. The trading price of HOOD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of HOOD may be traded by short sellers which may put pressure on the supply and demand for the common stock of HOOD, further influencing volatility in its market price. Public perception and other factors outside of the control of HOOD may additionally impact HOOD's stock price due to HOOD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against HOOD in the past. While HOOD continues to defend such actions, any judgment against HOOD, or any future stockholder litigation could result in substantial costs and a diversion of the management of HOOD's attention and resources. If HOOD trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

HOOD Performance Risk. HOOD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of HOOD to decline. HOOD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance HOOD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If HOOD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by HOOD could decline significantly.

HOOD Operational Risks. HOOD's plans to venture into new international markets introduces significant uncertainties that may not yield desired outcomes. Operations are subject to complex and evolving laws, with non-compliance posing threats to HOOD's business. Past and potential future regulatory investigations, settlements, and litigation could lead to substantial costs and reputational damage. Intense competition from rivals with greater resources threatens HOOD's market position and revenue. Failure to retain existing customers or attract new ones, coupled with reduced usage of products and services, may result in declining revenue. Moreover, failure to develop and monetize innovative offerings could diminish competitiveness and revenue streams.

Dependence on complex software and systems entails the risk of interruptions, instability, and flaws, potentially disrupting operations. Reliance on third-party entities for critical functions exposes the company to risks associated with their performance. Additionally, incorporating AI technologies presents business, compliance, and reputational risks. Cybersecurity breaches targeting the company's systems or customer data could lead to significant financial and reputational damage. Failure to maintain required net capital levels may result in restrictions and regulatory actions.

Risks associated with the effectiveness of compliance and risk management policies and procedures may impact operations under different market conditions. Operating in the highly volatile cryptocurrency market exposes the company to uncertainties and fluctuations affecting trading volumes and revenues.

Regulatory uncertainties surrounding cryptocurrency classification and compliance could lead to scrutiny, fines, and penalties. The complexity of rapidly evolving and difficult-to-interpret cryptocurrency laws and regulations poses challenges and compliance risks. Offering payment and spending services introduces risks related to illegal payments, customer asset loss, disputes, and liabilities. Future issuances of stock may lead to significant dilution, impacting shareholder value. Lastly, concentrated voting power with founders and multi-class stock structures limit shareholder influence over company decisions.

Financial Exchanges and Data Industry Risks. The industry is highly susceptible to fluctuations in economic conditions, changes in market sentiment, and regulatory alterations, which can significantly affect market volatility and trading volumes.

Technological disruptions or failures, including cybersecurity breaches, could compromise user data and disrupt trading activities, potentially leading to financial losses for both the company and its users. Additionally, the competitive landscape, with rapid technological advancements and the emergence of new competitors, could impact HOOD's market share and profitability. Such factors could adversely affect HOOD's business performance and stock price and, in turn, negatively impact the Fund.

Global Crypto Asset Trading Platform Risks. HOOD has announced plans to expand its crypto asset business. Such an expansion will subject HOOD to risks related to regulatory compliance, such as the potential for increased scrutiny, enhanced anti-money laundering (AML) and know your customer (KYC) requirements, and the need for additional licenses in various jurisdictions. Operational risks will also arise from the complexities of integrating the new platform's operations, technology, and culture, as well as the need to bolster system security and manage a more extensive technology infrastructure. Market risks, including high volatility and liquidity management challenges, will become more pronounced. Reputational risks could emerge from potential security breaches, operational failures, or regulatory violations, affecting customer trust and market perception. Legal risks may increase due to potential litigation and intellectual property issues. Additionally, HOOD will be subject to financial risks associated with the capital investment required for the expansion.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing

member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund’s investments in options were to exceed 25% of the Fund’s total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the “Adviser”) serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ JD Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the ADR of JD.com, Inc. ("JD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

(1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

(2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of the ADR of JD (NYSE Arca: JD) ("JD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to JD regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of JD, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of JD increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of JD,
- current income from the option premiums, and

- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of JD.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to JD equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to JD.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

JD.Com, Inc. (“JD”)

JD is a leading supply chain-based technology and service provider, providing products and services to consumers, third-party merchants, suppliers and other business partners through its subsidiaries, consolidated variable interest entities (“VIEs”) and consolidated VIEs’ subsidiaries. JD is listed on the Nasdaq Global Select Market (“Nasdaq”).

The American Depositary Share of JD is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by JD pursuant to the Exchange Act can be located by reference to the SEC file number 001-36450 through the SEC’s website at www.sec.gov. In addition, information regarding JD may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of JD or other securities of JD. The Fund has derived all disclosures contained in this document regarding JD from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to JD. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding JD is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of JD (and therefore the price of JD at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning JD could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of JD.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH JD.COM, INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to JD. As of the date of the Prospectus, JD is assigned to the broadline retail industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

JD Risk. The Fund invests in options contracts that are based on the value of JD. This subjects the Fund to certain of the same risks as if it owned shares of JD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of JD, the Fund may also be subject to the following risks:

Indirect Investment in JD Risk. JD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of JD but will be exposed to the performance of JD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

JD Trading Risk. The trading price of JD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of JD may be traded by short sellers which may put pressure on the supply and demand for the common stock of JD, further influencing volatility in its market price. Public perception and other factors outside of the control of JD may additionally impact JD's stock price due to JD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. If JD trading is halted, trading in Shares of the JD Fund may be impacted, either temporarily or indefinitely.

JD Performance Risk. JD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of JD to decline. JD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance JD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If JD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by JD could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as JD, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in JD, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, JD, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not JD itself. Though contractual agreements enable JD to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by JD's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like JD, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of JD's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board (“PCAOB”) is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB’s inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company’s auditors for three consecutive years, the issuer’s securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund’s performance.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund’s investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund’s other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund’s investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Foreign Investment Risk. Because the Fund has indirect exposure to the ADR of a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Depositary Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic

instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund’s investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited

to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund’s investments in options were to exceed 25% of the Fund’s total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the

obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

YieldMax™ MARA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of MARA Holdings, Inc. ("MARA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

- (1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

- (2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of MARA Holdings, Inc. (The Nasdaq Stock Market LLC: MARA) ("MARA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to MARA regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of MARA, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of MARA increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of MARA,
- current income from the option premiums, and

- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of MARA.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund’s derivative investments. They will also generate income.	6-month to 2-year maturities
----------------------------------	---	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to MARA equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to MARA.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

MARA HOLDINGS, INC. (“MARA”)

MARA is a digital asset technology company that is principally engaged in producing or “mining” digital assets with a focus on the Bitcoin ecosystem. MARA is listed on the Nasdaq Stock Market LLC (“Nasdaq”). Per MARA’s most recent Form 10-K filing, the aggregate market value of common stock held by non-affiliates of MARA (based on the last reported sale price of its class A common stock on June 30, 2023, on Nasdaq) was approximately \$2.4 billion.

MARA is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by MARA pursuant to the Exchange Act can be located by reference to the SEC file number 001-36555 through the SEC’s website at www.sec.gov. In addition, information regarding MARA may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of MARA or other securities of MARA. The Fund has derived all disclosures contained in this document regarding MARA from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to MARA. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding MARA is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of MARA (and therefore the price of MARA at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning MARA could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of MARA.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH MARA HOLDINGS, INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to MARA. As of the date of the Prospectus, MARA is assigned to the software industry.

Information About Bitcoin

The Fund does not invest directly in Bitcoin or any other digital assets. The Fund does not invest directly in derivatives that track the performance of Bitcoin or any other digital assets. The Fund does not invest in or seek direct exposure to the current “spot” or cash price of Bitcoin. Investors seeking direct exposure to the price of Bitcoin should consider an investment other than the Fund. The following provides an overview of Bitcoin, the Bitcoin Blockchain, the relationship between the two, as well as their use cases.

Bitcoin Description:

Bitcoin, the first and most well-known cryptocurrency, operates on a decentralized network using blockchain technology to facilitate secure and anonymous transactions. Bitcoin represents a digital asset that functions as a medium of exchange utilizing cryptographic

protocols to secure transactional processes, control the creation of additional units, and verify the transfer of assets. Its operation on a decentralized blockchain network ensures both transparency and immutability of records, without the need for a central authority. This innovative technology underpinning Bitcoin allows for peer-to-peer transactions and provides a framework for digital scarcity, making Bitcoin a unique investment commodity within the digital currency landscape. Although Bitcoin is called a crypto or digital currency, it is not presently accepted widely as payment.

Bitcoin Blockchain Description:

The Bitcoin blockchain constitutes a decentralized, digital ledger technology that chronologically and publicly records all Bitcoin transactions. This technology is characterized by its use of blocks, which are structurally linked in a chain through cryptographic hashes. Each block contains a list of transactions that, once verified and added to the blockchain through a consensus process known as proof of work, becomes irreversible and tamper-evident. The integrity, transparency, and security of the transactional data are maintained autonomously within the Bitcoin network, eliminating the necessity for central oversight and facilitating trust in a peer-to-peer system.

The Relationship between Bitcoin and Bitcoin Blockchain:

Bitcoin is a digital asset that operates on the Bitcoin blockchain, a decentralized and cryptographic ledger system. The Bitcoin blockchain underpins the entire Bitcoin network, providing a secure and transparent mechanism for recording Bitcoin transactions. Each Bitcoin transaction is verified by network participants and permanently recorded on the Bitcoin blockchain, ensuring the integrity and traceability of the digital asset. Thus, while Bitcoin serves as a medium of exchange or store of value, the Bitcoin blockchain acts as the immutable record-keeping system that facilitates and authenticates the circulation and ownership of Bitcoin. This symbiotic relationship ensures that Bitcoin operates in a trustless and decentralized manner, with the Bitcoin blockchain maintaining the currency's history and scarcity.

Bitcoin and Bitcoin Blockchain Use Cases:

Bitcoin and the Bitcoin blockchain serve as innovative financial instruments within the digital economy, offering multiple use cases. However, their adoption has been limited. Key applications include:

1. **Decentralized Transactions:** Bitcoin facilitates peer-to-peer financial transactions globally without the need for intermediaries, reducing transaction costs and times. This feature makes it an attractive option for cross-border transfers and remittances. Bitcoin and the Bitcoin Blockchain were designed to be used as an alternative general purpose payment system and while bitcoin may be an attractive option for cross border transfers and remittances, it is presently not widely used as a means of payment.
2. **Store of Value:** Due to its limited supply and decentralized nature, Bitcoin is perceived as a digital alternative to traditional stores of value like gold, potentially serving as a hedge against inflation and currency devaluation.
3. **Smart Contracts:** While primarily associated with other blockchain platforms, the Bitcoin blockchain can execute smart contracts—self-executing contractual agreements with the terms directly written into code—thereby enabling automated and conditional transactions.
4. **Asset Tokenization:** The Bitcoin blockchain provides a platform for tokenizing assets, converting rights to an asset into a digital token on the blockchain. This can include real estate, stocks, or other forms of assets, enhancing liquidity and market efficiency. At this time this functionality is limited. Unlike the scripting language of blockchain platforms like Ethereum, the scripting language of the Bitcoin Blockchain is not Turing complete, and thus more limited in terms of the types of smart contracts it can support.
5. **Digital Identity Verification:** Leveraging the security and immutability of the Bitcoin blockchain, companies can develop digital identity verification systems, enhancing privacy and reducing identity theft. At this time, this functionality is limited.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which they appear.

MARA Risk. The Fund invests in options contracts that are based on the value of MARA. This subjects the Fund to certain of the same risks as if it owned shares of MARA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of MARA, the Fund may also be subject to the following risks:

Indirect Investment in MARA Risk. MARA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of MARA but will be exposed to the performance of MARA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

MARA Trading Risk. The trading price of MARA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of MARA may be traded by short sellers which may put pressure on the supply and demand for the common stock of MARA, further influencing volatility in its market price. Public perception and other factors outside of the control of MARA may additionally impact MARA's stock price due to MARA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against MARA in the past. While MARA continues to defend such actions, any judgment against MARA, or any future stockholder litigation could result in substantial costs and a diversion of the management of MARA's attention and resources. If MARA trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

MARA Performance Risk. MARA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of MARA to decline. MARA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance MARA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If MARA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by MARA could decline significantly.

Bitcoin Mining Industry & Bitcoin Risks.

Companies in the Bitcoin mining industry are subject to inherent technological and operational risks. MARA's operations, which include validating transactions and securing the network, are heavily dependent on energy consumption, making MARA's profitability susceptible to fluctuations in energy prices and potential regulatory changes affecting energy usage. The concentration of mining operations in regions with lower energy costs can also expose the company to local political and economic instability, potentially disrupting operations. Technological changes or advancements in mining algorithms can render MARA's existing equipment obsolete, leading to significant capital losses. Moreover, as the reward for mining new blocks diminishes over time, the financial incentive to continue mining may decrease, potentially reducing MARA's profitability and affecting its operational viability.

Bitcoin's price is highly volatile, and its market is influenced by the changing Bitcoin network, fluctuating acceptance levels, and unpredictable usage trends. Not being a legal tender and operating outside central authority systems like banks, Bitcoin faces potential government restrictions. For instance, some countries may limit or ban Bitcoin transactions, negatively impacting its market value.

The risks associated with Bitcoin include the possibility of fraud, theft, market manipulation, and security breaches in trading platforms. A small group of large Bitcoin holders, known as "whales," can significantly influence Bitcoin's price. The largely unregulated nature of Bitcoin and its trading venues heightens risks of fraudulent activities and market manipulation, which could affect Bitcoin's price. For example, if a group of miners gains control over a majority of the Bitcoin network, they could manipulate transactions to their advantage. Historical instances have seen Bitcoin trading venues shut down due to fraud or security breaches, often leaving investors without recourse and facing significant losses.

Updates to Bitcoin's software, proposed by developers, can lead to the creation of new digital assets, or "forks," if not broadly adopted. This can impact Bitcoin's demand and the Fund's performance. The extreme volatility of Bitcoin's market price can result in shareholder losses. Furthermore, the operation of Bitcoin exchanges may be disrupted or cease altogether due to various issues, further affecting Bitcoin's price and the Fund's investments.

The value of Bitcoin has historically been subject to significant speculation, making trading and investing in Bitcoin reliant on market sentiment rather than traditional fundamental analysis.

Bitcoin's price can be influenced by events unrelated to its security or utility, including instability in other speculative areas of the crypto/blockchain space, potentially leading to substantial declines in its value.

Risks associated with crypto asset trading platforms include fragmentation, regulatory non-compliance, and the possibility of enforcement actions by regulatory authorities, which could impact the valuation of Bitcoin-linked derivatives held by the Underlying ETPs.

The security of the Bitcoin blockchain may be compromised if a single miner or group controls more than 50% of the network's hashing power, where hashing power refers to the computational capacity used to validate and secure transactions on the blockchain.

Proposed changes to the Bitcoin protocol may not be universally adopted, leading to the creation of competing blockchains (forks) with different assets and participants, exemplified by past forks like Bitcoin Cash and Bitcoin SV.

The Bitcoin blockchain protocol may contain vulnerabilities that attackers could exploit to disrupt its operation, potentially compromising the security and reliability of the network.

Emerging alternative public blockchains, particularly those emphasizing privacy through technologies like zero-knowledge cryptography, pose risks and challenges to the dominance of the Bitcoin blockchain as a payment system.

Common impediments to adopting the Bitcoin blockchain as a payment network include slow transaction processing, variability in transaction fees, and the volatility of Bitcoin's price, which may deter widespread adoption by businesses and consumers.

The development and use of "Layer II solutions" are critical for the scalability and functionality of the Bitcoin blockchain, but they also introduce risks such as off-chain transaction execution, which could affect transparency and security. Layer II solutions are off-chain protocols that improve scalability and reduce transaction costs by processing transactions outside the main blockchain network.

Adoption and use of other blockchains supporting advanced applications like smart contracts present challenges to the dominance of the Bitcoin blockchain, potentially impacting its long-term relevance and utility in the evolving landscape of blockchain technology.

- **Digital Assets Risk:** Digital assets like Bitcoin, designed as mediums of exchange, are still an emerging asset class. They operate independently of any central authority or government backing and are subject to regulatory changes and extreme price volatility. The trading platforms for digital assets are relatively new, largely unregulated, and thus more vulnerable to fraud and failures compared to traditional, regulated exchanges. Shutdowns of these platforms due to fraud, technical glitches, or security issues can significantly affect digital asset prices and market volatility.
- **Digital Asset Markets Risk:** The digital asset market, particularly Bitcoin, has experienced considerable volatility, leading to market disruptions and erosion of confidence among market participants. This instability and the resultant negative publicity could adversely affect the Fund's reputation and trading prices. Ongoing market turbulence could significantly impact the value of the Fund's share.
- **Blockchain Technology Risk:** Blockchain technology, which underpins Bitcoin and other digital assets, is relatively new, and many of its applications are untested. The adoption of blockchain and the development of competing platforms or technologies could affect its usage. Investments in companies or vehicles that utilize blockchain technology are subject to market volatility and may experience lower trading volumes compared to more established industries. Additionally, regulatory changes, internet disruptions, cybersecurity incidents, and intellectual property disputes could further affect the adoption and functionality of blockchain technology.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the

reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract’s expiration date affects the impact of the potential options contract income on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund’s investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be

significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ PDD Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the ADR of PDD Holdings Inc. ("PDD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

- (1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- (2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of the ADR of PDD Holdings Inc. (Nasdaq Global Stock Market: PDD) ("PDD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to PDD regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of PDD, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of PDD increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of PDD,
- current income from the option premiums, and

- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of PDD.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to PDD equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to PDD.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

PDD Holdings Inc. (“PDD”)

PDD Holdings Inc. is a multinational commerce group that owns and operates a portfolio of businesses. The company aims to bring more businesses and people into the digital economy so that local communities and small businesses can benefit from increased productivity and new opportunities. It has built a network of sourcing, logistics, and fulfillment capabilities, that support its underlying businesses. The company was founded by in 2015, is incorporated in the Cayman Islands, and is headquartered in Dublin, Ireland. PDD is listed on the Nasdaq Global Select Market (“Nasdaq”). PDD’s primary business operations are located in China.

The American Depositary Share of PDD is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by PDD pursuant to the Exchange Act can be located by reference to the SEC file number 001-38591 through the SEC’s website at www.sec.gov. In addition, information regarding PDD may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of PDD or other securities of PDD. The Fund has derived all disclosures contained in this document regarding PDD from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to PDD. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding PDD is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of PDD (and therefore the price of PDD at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning PDD could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of PDD.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH PDD HOLDINGS INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to PDD. As of the date of the Prospectus, PDD is assigned to the broadline retail industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

PDD Risk. The Fund invests in options contracts that are based on the value of PDD. This subjects the Fund to certain of the same risks as if it owned shares of PDD, even though it does not. By virtue of the Fund’s investments in options contracts that are based on the value of PDD, the Fund may also be subject to the following risks:

Indirect Investment in PDD Risk. PDD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of PDD but will be exposed to the performance of PDD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

PDD Trading Risk. The trading price of PDD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of PDD may be traded by short sellers which may put pressure on the supply and demand for the common stock of PDD, further influencing volatility in its market price. Public perception and other factors outside of the control of PDD may additionally impact PDD’s stock price due to PDD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company’s securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against PDD in the past. While PDD continues to defend such actions, any judgment against PDD, or any future stockholder litigation could result in substantial costs and a diversion of the management of PDD’s attention and resources. If PDD trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

PDD Performance Risk. PDD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of PDD to decline. PDD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance PDD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If PDD’s guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by PDD could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as PDD, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors’ technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in PDD, a Cayman Islands holding company, carries several significant risks due to the company’s unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, PDD, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not PDD itself. Though contractual agreements enable PDD to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by PDD’s consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like PDD, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of PDD's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated

with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Foreign Investment Risk. Because the Fund has indirect exposure to the ADR of a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.

- *Depository Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund’s investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency

or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

YieldMax™ PLTR Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of Palantir Technologies Inc. ("PLTR" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses (includes dividend, tax and broker expense) ⁽²⁾	0.45%
Total Annual Fund Operating Expenses	<u>1.44%</u>

- (1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- (2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$147	\$456

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. For the fiscal period from October 7, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 0% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of PLTR (Nasdaq: PLTR) ("PLTR" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to PLTR regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of PLTR, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of PLTR increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of PLTR,

- current income from the option premiums, and
- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of PLTR.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to PLTR equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to PLTR.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Palantir Technologies Inc. (“PLTR”)

PLTR builds software that empowers organizations to effectively integrate their data, decisions, and operations at scale. PLTR is listed on the The Nasdaq Stock Market LLC (“Nasdaq”). Per PLTR’s most recent Form 10-K filing, the aggregate market value of common stock held by non-affiliates of PLTR (based on the last reported sale price of its class A common stock on June 28, 2024, on the Nasdaq) was approximately \$51.5 billion.

PLTR is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by PLTR pursuant to the Exchange Act can be located by reference to SEC file number 001-39540 through the SEC’s website at www.sec.gov. In addition, information regarding PLTR may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of PLTR or other securities of PLTR. The Fund has derived all disclosures contained in this document regarding PLTR from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to PLTR. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding PLTR is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of PLTR (and therefore the price of PLTR at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning PLTR could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of PLTR.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH PALANTIR TECHNOLOGIES INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to PLTR. As of the date of the Prospectus, PLTR is assigned to the software industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

PLTR Risk. The Fund invests in options contracts that are based on the value of PLTR. This subjects the Fund to certain of the same risks as if it owned shares of PLTR, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of PLTR, the Fund may also be subject to the following risks:

Indirect Investment in PLTR Risk. PLTR is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of PLTR but will be exposed to the performance of PLTR (the Underlying Security). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

PLTR Trading Risk. The trading price of PLTR may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of PLTR may be traded by short sellers which may put pressure on the supply and demand for the common stock of PLTR, further influencing volatility in its market price. Public perception and other factors outside of the control of PLTR may additionally impact PLTR's stock price due to PLTR garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against PLTR in the past. While PLTR continues to defend such actions, any judgment against PLTR, or any future stockholder litigation could result in substantial costs and a diversion of the management of PLTR's attention and resources. If PLTR trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

PLTR Performance Risk. PLTR may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of PLTR to decline. PLTR provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance PLTR provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If PLTR's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by PLTR could decline significantly.

Software Industry Risk. The software industry can be significantly affected by intense competition, aggressive pricing, technological innovations, and product obsolescence. Companies in the software industry are subject to significant competitive pressures, such as aggressive pricing, new market entrants, competition for market share, short product cycles due to an accelerated rate of technological developments and the potential for limited earnings and/or falling profit margins. These companies also face the risks that new services, equipment or technologies will not be accepted by consumers and businesses or will become rapidly obsolete. These factors can affect the profitability of these companies and, as a result, the value of their securities. Also, patent protection is integral to the success of many companies in this industry, and profitability can be affected materially by, among other things, the cost of obtaining (or failing to obtain) patent approvals, the cost of litigating patent infringement and the loss of patent protection for products (which significantly increases pricing pressures and can materially reduce profitability with respect to such products). In addition, many software companies have limited operating histories. Prices of these companies' securities historically have been more volatile than other securities, especially over the short term.

AI Platform Risk. PLTR has launched an AI (artificial intelligence) platform, which subjects PLTR to additional risks, including challenges in developing and deploying new technologies to meet customer needs and ensuring compatibility with third-party products and services. PLTR may struggle to hire, retain, and train qualified personnel, which is crucial for meeting customer demand. The use of AI could lead to reputational harm or liability issues, and there may be difficulties in obtaining, maintaining, protecting, and enforcing intellectual property rights. Additionally, the platform could encounter real or perceived errors, failures, defects, or bugs, and reliance on third-party technology could pose risks if it becomes difficult to replace or causes errors. Finally, PLTR's AI platform will be subject to complex and evolving U.S. and non-U.S. laws and regulations regarding privacy, data protection, security, and technology protection.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves

investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's

NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to

supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health

issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ RBLX Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the Roblox Corporation ("RBLX" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

- (1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

- (2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of Roblox Corporation (NYSE: RBLX) ("RBLX" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to RBLX regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of RBLX, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of RBLX increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of RBLX,
- current income from the option premiums, and

- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of RBLX.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to RBLX equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to RBLX.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Roblox Corporation (“RBLX”)

RBLX operates an online platform that allows users to create, share, and play games and experiences using its proprietary development tools. RBLX is listed on the New York Stock Exchange (“NYSE”). Per RBLX’s most recent Form 10-K filing, the aggregate market value of the voting Class A common equity held by non-affiliates of RBLX (based on the last reported sale price of its common stock on June 28, 2024, on the NYSE) was approximately \$17.4 billion.

RBLX is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by RBLX pursuant to the Exchange Act can be located by reference to SEC file number 001-39763 through the SEC’s website at www.sec.gov. In addition, information regarding RBLX may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of RBLX or other securities of RBLX. The Fund has derived all disclosures contained in this document regarding RBLX from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to RBLX. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding RBLX is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of RBLX (and therefore the price of RBLX at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning RBLX could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of RBLX.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH ROBLOX CORPORATION.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to RBLX. As of the date of the Prospectus, RBLX is assigned to the entertainment industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

RBLX Risk. The Fund invests in options contracts that are based on the value of RBLX. This subjects the Fund to certain of the same risks as if it owned shares of RBLX, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of RBLX, the Fund may also be subject to the following risks:

Indirect Investment in RBLX Risk. RBLX is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of RBLX but will be exposed to the performance of RBLX (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

RBLX Trading Risk. The trading price of RBLX may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of RBLX may be traded by short sellers which may put pressure on the supply and demand for the common stock of RBLX, further influencing volatility in its market price. Public perception and other factors outside of the control of RBLX may additionally impact RBLX's stock price due to RBLX garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against RBLX in the past. While RBLX continues to defend such actions, any judgment against RBLX, or any future stockholder litigation could result in substantial costs and a diversion of the management of RBLX's attention and resources. If RBLX trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

Operational and Execution Risks: RBLX is subject to various risks, including dependence on user engagement, as its success hinges on retaining a large and active user base whose preferences may shift. The company must also effectively manage and moderate user-generated content to prevent the dissemination of inappropriate material, which could tarnish its reputation and deter users. Ensuring robust platform security and privacy is crucial, especially given its predominantly young audience, with failures potentially leading to legal issues and a loss of trust. Regulatory changes in data privacy, consumer protection, and online safety present ongoing challenges. Additionally, Roblox operates in a competitive, rapidly evolving industry, necessitating continual technological innovation to stay ahead. The company's revenue heavily relies on in-platform purchases using its virtual currency, making it vulnerable to changes in monetization strategies or disruptions in payment systems, highlighting the importance of adapting to maintain growth and sustainability in the online gaming and content creation market.

Interactive Media and Services Industry Risks: The interactive media and services industry faces significant risks due to intense market competition, evolving regulatory environments, and reliance on advanced technology and infrastructure. Companies must navigate a complex landscape where technological advancements and new entrants constantly introduce competitive pressures. Regulatory changes, particularly those related to data privacy, content moderation, and intellectual property, can impose substantial compliance costs and legal liabilities. Additionally, the industry depends heavily on the security and reliability of its technological infrastructure; any disruptions or breaches can lead to operational challenges and compromised user information. Attracting, engaging, and retaining users is crucial for success, and failure to manage content moderation effectively can result in legal, regulatory, and reputational risks.

Economic conditions, international operations, and the need for continuous innovation further complicate the industry's risk profile. Economic downturns and fluctuations in consumer spending can reduce demand for interactive media and services, affecting revenue and profitability. Operating globally exposes companies to political instability, currency fluctuations, and varying regulatory standards. The industry must invest in research and development to stay competitive, but these investments come with no guarantees of success. Additionally, cybersecurity threats pose a significant risk, with potential for data breaches and financial losses. Implementing robust cybersecurity measures is essential to mitigate these threats and protect valuable digital assets.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract’s expiration date affects the impact of the potential options contract income on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund’s investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be

significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ SHOP Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of shares of Shopify Inc. ("SHOP" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

- (1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- (2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of shares of SHOP (NYSE: SHOP) ("SHOP" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to SHOP regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of SHOP, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of SHOP increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of SHOP,
- current income from the option premiums, and

- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of SHOP.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to SHOP equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to SHOP.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Shopify Inc. (“SHOP”)

SHOP is a Canadian multinational e-commerce company headquartered in Ottawa, Ontario. SHOP is listed on the New York Stock Exchange (“NYSE”). The aggregate market value of SHOP’s Class A Subordinate Voting Shares held by non-affiliates, based on the closing price of the Class A Subordinate Voting Shares as reported by the NYSE on June 28, 2024, was \$79.8 billion.

SHOP is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by SHOP pursuant to the Exchange Act can be located by reference to the SEC file number 001-37400 through the SEC’s website at www.sec.gov. In addition, information regarding SHOP may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of SHOP or other securities of SHOP. The Fund has derived all disclosures contained in this document regarding SHOP from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to SHOP. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding SHOP is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of SHOP (and therefore the price of SHOP at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning SHOP could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of SHOP.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH SHOPIFY INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry or group of industries as SHOP. As of the date of the Prospectus, SHOP is assigned to the information technology services industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

SHOP Risk. The Fund invests in options contracts that are based on the value of SHOP. This subjects the Fund to certain of the same risks as if it owned shares of SHOP, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of SHOP, the Fund may also be subject to the following risks:

Indirect Investment in SHOP Risk. SHOP is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of SHOP but will be exposed to the performance of SHOP (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

SHOP Trading Risk. The trading price of SHOP may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of SHOP may be traded by short sellers which may put pressure on the supply and demand for the common stock of SHOP, further influencing volatility in its market price. Public perception and other factors outside of the control of SHOP may additionally impact SHOP's stock price due to SHOP garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against SHOP in the past. While SHOP continues to defend such actions, any judgment against SHOP, or any future stockholder litigation could result in substantial costs and a diversion of the management of SHOP's attention and resources. If SHOP trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

SHOP Performance Risk. SHOP may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of SHOP to decline. SHOP provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance SHOP provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If SHOP's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by SHOP could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as SHOP, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract’s expiration date affects the impact of the potential options contract income on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund’s investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Foreign Investment Risk. Because the Fund has indirect exposure to a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments

can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ SMCI Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the Super Micro Computer, Inc. ("SMCI" or "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

- (1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- (2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years
	\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available. For the fiscal period from September 11, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 0% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of Super Micro Computer, Inc. (Nasdaq Global Select Market: SMCI) ("SMCI" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to SMCI regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of SMCI, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of SMCI increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of SMCI,

- current income from the option premiums, and
- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of SMCI.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to SMCI equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to SMCI.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Super Micro Computer, Inc. (“SMCI”)

SMCI specializes in designing and manufacturing high-performance server solutions and advanced computing technologies for enterprise, data center, cloud computing, and AI applications. SMCI is listed on the Nasdaq Global Select Market (“Nasdaq”). Per SMCI’s most recent Form 10-K filing, the aggregate market value of the voting and non-voting common equity held by non-affiliates of SMCI (based on the last reported sale price of its common stock on December 31, 2023 on the Nasdaq Global Select Market) was approximately \$13.5 billion.

SMCI is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by SMCI pursuant to the Exchange Act can be located by reference to SEC file number 001-33383 through the SEC’s website at www.sec.gov. In addition, information regarding SMCI may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of SMCI or other securities of SMCI. The Fund has derived all disclosures contained in this document regarding SMCI from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to SMCI. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding SMCI is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of SMCI (and therefore the price of SMCI at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning SMCI could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of SMCI.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH SUPER MICRO COMPUTER, INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to SMCI. As of the date of the Prospectus, SMCI is assigned to the technology hardware, storage & peripherals industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

SMCI Risk. The Fund invests in options contracts that are based on the value of SMCI. This subjects the Fund to certain of the same risks as if it owned shares of SMCI, even though it does not. By virtue of the Fund’s investments in options contracts that are based on the value of SMCI, the Fund may also be subject to the following risks:

Indirect Investment in SMCI Risk. SMCI is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of SMCI but will be exposed to the performance of SMCI (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

SMCI Trading Risk. The trading price of SMCI may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of SMCI may be traded by short sellers which may put pressure on the supply and demand for the common stock of SMCI, further influencing volatility in its market price. Public perception and other factors outside of the control of SMCI may additionally impact SMCI’s stock price due to SMCI garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company’s securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against SMCI in the past. While SMCI continues to defend such actions, any judgment against SMCI, or any future stockholder litigation could result in substantial costs and a diversion of the management of SMCI’s attention and resources. If SMCI trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

Operational and Execution Risks: SMCI faces several operational and execution risks that could adversely impact its business operations and financial performance. Adverse economic conditions may harm the company’s overall business, while recent events in eastern Europe and the Taiwan Strait pose additional challenges and uncertainties. Fluctuations in quarterly operating results, unpredictability in revenue and margins, and the concentration of larger customers and sales opportunities are factors contributing to operational volatility. Additionally, failure to meet financial guidance, challenges in securing favorable financing, and risks associated with inventory management and supply chain disruptions further compound these risks. Cybersecurity threats, difficulties in expanding and retaining the sales force, and potential conflicts of interest with affiliated companies add complexity to operational management. Moreover, reliance on key personnel, potential confusion in sales channels, and challenges in attracting and integrating key employees also contribute to operational uncertainties.

Strategic and Industry Risks: Expanding international operations, managing growth effectively, and responding to technological trends are critical strategic challenges for SMCI. The company operates in a highly competitive market, and industry consolidation could intensify competition. Dependence on suppliers, indirect sales channels, and the need for continuous product innovation further highlight industry-specific risks. Quality control issues, fluctuations in corporate ventures, and challenges in managing international business operations also pose strategic concerns for SMCI.

Additional & Technology-Related Risks. SMCI faces additional risks specific to its operations, including significant reliance on a limited number of key suppliers, which could disrupt production if supply chain issues arise. SMCI is also vulnerable to rapid technological changes in the industry, necessitating continuous innovation and investment in research and development. SMCI’s global operations expose it to geopolitical risks, currency fluctuations, and compliance with diverse regulatory environments. Moreover, SMCI’s dependence on key personnel means that the loss of any critical team members could adversely affect its business.

Delisting Risk. SMCI announced in 2024 that it received a notification letter from Nasdaq stating that SMCI is not in compliance with Nasdaq listing rule 5250(c)(1), which requires timely filing of reports with the U.S. Securities and Exchange Commission. The letter, dated September 17, 2024, was sent as a result of SMCI’s delay in filing its Annual Report on Form 10-K for the period ending June 30, 2024 (the “Form 10-K”). SMCI subsequently filed its Form 10-K and its Quarterly Reports on Form 10-Q for the first two quarters of its 2025 fiscal year on February 25, 2025 and is therefore back in compliance; however, should SMCI fail to comply with the rule within required timelines going forward it’s possible SMCI stock could be delisted which would prevent the Fund from continuing to operate.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund’s investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund’s other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves

investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's

NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to

supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health

issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

Information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ TSM Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the ADR of Taiwan Semiconductor Manufacturing Company Ltd. ("TSM" or "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- (1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- (2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available. For the fiscal period from August 20, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 7% of the average value of its portfolio

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of the ADR of Taiwan Semiconductor Manufacturing Company Ltd. (NYSE: TSM) ("TSM" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to TSM regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of TSM, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of TSM increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of TSM,
- current income from the option premiums, and
- at most times, a limit on the Fund’s participation in gains, if any, of the share price returns of TSM.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund’s synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to TSM equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to TSM.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Taiwan Semiconductor Manufacturing Company Ltd. (“TSM”)

TSM is a dedicated foundry in the semiconductor industry which engages mainly in the manufacturing, sales, packaging, testing and computer-aided design of integrated circuits and other semiconductor devices and the manufacturing of masks. TSM is listed on the New York Stock Exchange (“NYSE”).

The American Depositary Share of TSM is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by TSM pursuant to the Exchange Act can be located by reference to the SEC file number 001-14700 through the SEC’s website at www.sec.gov. In addition, information regarding TSM may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of TSM or other securities of TSM. The Fund has derived all disclosures contained in this document regarding TSM from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to TSM. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding TSM is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of TSM (and therefore the price of TSM at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning TSM could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of TSM.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH TAIWAN SEMICONDUCTOR MANUFACTURING COMPANY LTD.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to TSM. As of the date of the Prospectus, TSM is assigned to the semiconductors & semiconductor equipment industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

TSM Risk. The Fund invests in options contracts that are based on the value of TSM. This subjects the Fund to certain of the same risks as if it owned shares of TSM, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of TSM, the Fund may also be subject to the following risks:

Indirect Investment in TSM Risk. TSM is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of TSM but will be exposed to the performance of TSM (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

TSM Trading Risk. The trading price of TSM may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of TSM may be traded by short sellers which may put pressure on the supply and demand for the common stock of TSM, further influencing volatility in its market price. Public perception and other factors outside of the control of TSM may additionally impact TSM's stock price due to TSM garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against TSM in the past. While TSM continues to defend such actions, any judgment against TSM, or any future stockholder litigation could result in substantial costs and a diversion of the management of TSM's attention and resources. If TSM trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

TSM Performance Risk. TSM may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of TSM to decline. TSM provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance TSM provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If TSM's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by TSM could decline significantly.

Semiconductor Company Risk. Competitive pressures may have a significant effect on the financial condition of semiconductor companies and, as product cycles shorten and manufacturing capacity increases, these companies may become increasingly subject to aggressive pricing, which hampers profitability. Reduced demand for end-user products, under-utilization of manufacturing capacity, and other factors could adversely impact the operating results of companies in the semiconductor sector. Semiconductor companies typically face high capital costs and may be heavily dependent on intellectual property rights. The semiconductor sector is highly cyclical, which may cause the operating results of many semiconductor companies to vary significantly. The stock prices of companies in the semiconductor sector have been and likely will continue to be extremely volatile.

Geopolitical Risks. TSM is subject to substantial geopolitical risks due to the complex and often tense relationship between Taiwan and China. The potential for military conflict or increased political pressure from China poses a substantial threat to TSM's operations and supply chain stability. Additionally, any escalation in cross-strait tensions could lead to economic sanctions, trade restrictions, or other regulatory measures that might disrupt TSM's business activities and international partnerships. TSM's reliance on global markets also means that geopolitical instability could affect investor confidence and result in fluctuations in its share price and market value. Furthermore, TSM's operational concentration in Taiwan makes it particularly vulnerable to regional political and military developments, which could severely impact its production capabilities and overall business continuity.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its

investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Foreign Investment Risk. Because the Fund has indirect exposure to the ADR of a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Depository Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on

the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund’s investments in options were to exceed 25% of the Fund’s total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the “Adviser”) serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

Information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

Each Fund’s primary investment objective is to seek current income, with a secondary investment objective to seek exposure to the share price of its Underlying Security, which is generally subject to a limit on potential investment gains.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. No Fund’s investment objective has been adopted as a fundamental investment policy and therefore each Fund’s investment objective may be changed without the consent of that Fund’s shareholders upon approval by the Board of Trustees (the “Board”) of Tidal Trust II (the “Trust”) and at least 60 days’ written notice to shareholders.

Principal Investment Strategies

Each Fund has an 80% policy that, under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to the underlying security referenced in the Fund’s investment objective.

For each Fund’s 80% test, the notional value of its options contracts will be used. “Notional value” refers to the “face” value of a Fund investment, rather than the amount of capital the Fund has actually committed. It represents the total value of the Fund’s position, rather than its equity in that position. Essentially, it reflects the full value of a leveraged position in the market, even if the Fund uses a fraction of that amount as collateral.

Each Fund’s 80% policy is non-fundamental and can be changed without shareholder approval. However, Fund shareholders would be given at least 60 days’ notice prior to any such change.

Synthetic Exposure to Underlying Security Price Returns

- The Funds purchase call option contracts on the Underlying Securities generally having one-month to six-month terms and strike prices equal to the then-current price of the Underlying Securities at the time of the purchases to provide the Funds indirect exposure to the upside price returns of the Underlying Securities. As a buyer of call option contracts, each Fund pays a premium to the seller of the options contracts to obtain the right to participate in the price returns of the Underlying Security beyond the strike price of the purchased call option contract at expiration (or earlier, if the Fund closes the option contract prior to expiration); and
- Each Fund simultaneously sells put option contracts on its Underlying Security to help pay the premium of the purchased call option contracts on the Underlying Security. Each Fund sells put option contracts that also generally have one-month to six-month terms and strike prices equal to the then-current price of the Underlying Security at the time of the sales to provide the Fund exposure to the downside price returns of the Underlying Security. As a seller of a put option contract, each Fund receives a premium from the buyer of the option contract in exchange for the Fund's obligation, if exercised, to purchase the Underlying Security at the strike price if the buyer exercises the option contract.
- The combination of the purchased call options and the sold put options provides each Fund with indirect investment exposure equal to approximately 100% of the applicable Underlying Security for the duration of the applicable options exposure.

Generating Monthly Income

- Each Fund sells call option contracts that are based on the value of its Underlying Security to generate income via option premiums. On a monthly basis or more frequently, a Fund will sell call option contracts on the Underlying Security with expiration dates of approximately one month or less in the future at strike prices that are approximately equal to 0%-15% above the then-current share price of the Underlying Security. By doing so, a Fund gives up the potential to fully participate in the Underlying Security gains, if any, beyond the strike price of the sold call options in exchange for income received in the form of call option premium. If the price of the Underlying Security is less than the call option's strike price at the expiration of the contract, the option contract will expire worthless and the Fund's return on the sold call position will be the premium originally received for selling the option contract. If the price of the Underlying Security is greater than the strike price at the expiration of the option contract, the Fund will forgo all of the returns that exceed the strike price of the option contract, and there will be a cost to "close out" the now in-the-money call options. The short call options are "closed out" (repurchased) prior to their expiration so that the Fund will not get assigned the, now, in-the-money call options. At times the call options may be "rolled" instead of simply closed. This is to say, new call options are simultaneously sold to open a new short call position, while the previously sold calls are repurchased to close out the original short call position.
- The Funds purchase multiple series of U.S. Treasury securities to collateralize the options contracts they sell. The U.S. Treasury securities also provide monthly income.

Covered Call Strategy:

When employing the covered call strategy, each Fund's sale of call option contracts to generate income will limit the degree to which the Fund will participate in increases in the share price of the Underlying Security. **This means that if the Underlying Security experiences an increase in the share price, the Fund will likely not experience that increase to the same extent (i.e., there is no participation beyond the level of the strike price of the sold call option contracts) and may result in the Fund significantly underperforming the Underlying Security.** The degree of participation in the Underlying Security gains will depend on the strike price of the short call option contracts and prevailing market conditions, especially market volatility, at the time the Fund sells the call option contracts. The potential for upside returns on the Underlying Security will also depend on whether a Fund fully "covers" its potential upside price return exposure to the Underlying Security by virtue of its sold call option contracts. If a Fund fully covers the upside price return exposure to the Underlying Security, the Fund's potential upside to the Underlying Security's price returns will be completely capped at the sold call options' strike price, meaning the Fund may forgo all price returns experienced by the Underlying Security beyond the strike price. If a Fund partially covers its potential upside return exposure with the sold call option, the Fund will have muted returns beyond the strike price of the sold call option to the extent that the Underlying Security's share price appreciates beyond the strike price.

The sale of call option contracts will offset losses experienced by an Underlying Security only to the extent of premiums received from such sold call option contracts. The Funds expect to participate in all the Underlying Security price return losses over the duration of the options contracts (e.g., if the Underlying Security decreases in value by 5%, the Fund should be expected to decrease in value by approximately 5%, before Fund fees and expenses) beyond the income received from the sold call option contract premiums.

Covered Call Spread Strategy:

When employing the *covered* call spread strategy, a Fund's sale of call option contracts, paired with the purchase of higher strike call option contracts, aims to generate income while still allowing for potential indirect participation in increases in the share price of its Underlying Security above the strike of the higher price call option which was bought. **However, this strategy may nonetheless still**

limit the degree to which the Fund fully participates in such increases as the Fund will not participate (directly or indirectly) in any appreciation between the strikes of the sold call option and bought call option.

The sale of credit call spreads will offset losses experienced by an Underlying Security’s share price only to the extent of premiums received from such sold call option contracts. Each Fund expects to participate in all of its Underlying Security’s losses beyond the income received from the sold call spreads contract premiums. For instance, if a Fund’s Underlying Security decreases in value by 5%, the Fund should be expected to decrease in value by approximately 5%, before Fund fees and expenses, beyond the income received from the sold call spreads contract premiums.

Examples:

The following table provides an overview of a Fund’s anticipated performance versus various changes in the share price of its Underlying Security when the Covered Call Strategy is employed.

Price Movement of Underlying Security	Anticipated Fund Performance & Performance Relative to Underlying Security*
Slow rise in share price	Increase in Fund NAV – Outperformance vs Underlying Security
Decline in share price or flat performance	Decline or flat Fund NAV – Outperformance vs Underlying Security
Significant price appreciation	Increase in Fund NAV – Significant underperformance vs Underlying Security

The following table provides an overview of a Fund’s anticipated performance versus various changes in the share price of its Underlying Security when the *Covered* Call Spread Strategy is employed.

Price Movement of Underlying Security	Anticipated Fund Performance & Performance Relative to Underlying Security*
Slow rise in share price	Decline or flat Fund NAV – Outperformance vs Underlying Security
Decline in share price or flat performance	Decline or flat Fund NAV – Outperformance vs Underlying Security
Significant price appreciation	Increase in Fund NAV – Underperformance to Underlying Security

* A Fund’s actual NAV performance and performance against the price of its Underlying Security may differ, primarily due to path dependency and strike selection as discussed above. Also, please see Price Participation Risk and Call Writing Strategy Risk.

Potential Upside Participation – Covered Call Strategy vs Covered Call Spread Strategy

To further illustrate how the Fund’s covered call spread strategy results in greater upside participation, the following examples compare the outcomes of a hypothetical covered call and a covered call spread. These scenarios demonstrate how a Fund’s use of its covered call spread strategy can lead to increased potential appreciation of its Underlying Security’s share price while still generating net premium income. Additionally, the examples highlight the estimated amount or limits on the greater participation in potential appreciation as compared to a call option contract strategy.

Examples:

Scenario 1 (Covered Call Strategy): Selling a Covered Call on an Underlying Security

- Underlying Security Share Price: \$100
- Strike Price of Sold Covered Call: \$105
- Premium Received: \$2

Outcome if the share price of the Underlying Security increases to \$110:

1. Share Price Increase: The Fund does not participate in the Underlying Security’s gain above \$105 because the Fund sold a call struck at \$105.
 - Gain on Underlying Security: \$5 (i.e., \$105 - \$100 = \$5)

2. Call Premium: Fund retains the initial \$2 premium.
3. Total Gain: \$7 (i.e., \$5 gain on Underlying Security, plus \$2 premium)

Scenario 2 (Covered Call Spread Strategy): Selling a Covered Call Spread on an Underlying Security

- Underlying Security Share Price: \$100
- Strike Prices of Covered Call Spread: Sold Call at \$100, Purchased Call at \$102.50
- Net Premium Received: \$2

Outcome if the share price of the Underlying Security increases to \$110:

1. Share Price Increase: The Fund does not participate in the Underlying Security's gain between \$100 and \$102.50 because the Fund sold a call struck at \$100 and purchased a call struck at \$102.50.
2. Net Premium: The Fund retains the net premium of \$2.
3. Long Call Gain: The Fund participates in the Underlying Security's gain above \$102.50 because the Fund purchased a call struck at \$102.50, which results in a \$7.50 gain (i.e., $\$110 - \$102.50 = \$7.50$)
4. Total Gain: \$9.50 (i.e., share price increase \$0, plus \$2 net premium, plus \$7.50 gain on the purchased call)

Comparison:

- **Covered Call:** Gain is capped at \$7, as participation in the Underlying Security's gain is capped at the sold call's \$105 strike price.
- **Covered Call Spread:** Gain is \$9.50, as the call spread provides additional upside participation beyond the purchased call's \$102.50 strike price. Furthermore, the Fund's gain potential is not capped (i.e., if the value of the Underlying Security's share price increases further, the Fund's gain would also increase further).

Conclusion:

In this scenario where the Underlying Security increases to \$110, the covered call spread strategy yields a higher total gain of \$9.50 compared to the \$7 gain from selling a simple covered call. The covered call spread allows the Funds to participate in potential upside beyond the strike price of the purchased call, resulting in the potential for additional gains to the Funds.

Further, if the Underlying Security's share price increases further beyond the strike price of the purchased call, the covered call spread strategy allows for continued participation in the upside through the increasing value of the purchased call. This results in the potential for additional gains for the Funds. In contrast, the covered call strategy's gain potential is capped at the strike price of the sold call.

There is no guarantee that each Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Each Fund's NAV is dependent on the value of the Fund's options contracts, which are based principally upon the share price of the Underlying Security, the volatility of the Underlying Security, which influences short call prices, and the time remaining until the expiration date of the short call option contracts. Each Fund's synthetic long exposure strategy will effectively allow that portion of the Fund's assets to move in synch with the daily changes in the Underlying Security's share price.

However, each Fund's participation in the potential upside in Underlying Security returns is limited by virtue of its sold option contract positions. The degree to which a shareholder may benefit from the upside exposure to the Underlying Security obtained by a Fund will depend on the time at which the investor purchases Shares of the Fund and the price movements of the Underlying Security. At any given time, there may be limited upside potential. If the price of the Underlying Security is near or has exceeded the strike price of a Fund's sold call option contracts when an investor purchases Shares, such investor may have little to no upside potential remaining until the current short calls are replaced by a new set of short call, as well as remain vulnerable to significant downside risk, including the loss of their entire investment.

Each Fund will invest significantly in short-term (6-month to 2-year) U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy. U.S. Treasury securities are government debt instruments issued by the United States Department of the

Treasury and are backed by the full faith and credit of the United States government. The Funds' investments in U.S. Treasury securities contribute to the monthly income sought by the Funds.

Exchange Traded Options Portfolio

The Funds will purchase and sell a combination of call and put exchange traded options contracts. In general, put options give the holder (*i.e.*, the buyer) the right to sell an asset (or deliver the cash value of the asset, in case of certain put options) and the seller (*i.e.*, the writer) of the put has the obligation to buy the asset (or receive cash value of the asset, in case of certain put options) at a certain defined price. Call options give the holder (*i.e.*, the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (*i.e.*, the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price.

FLEX options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of "over-the-counter" ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the OCC, a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts.

The FLEX options in which the Funds may invest are all European style options (options that are exercisable only on the expiration date). The FLEX options are listed on the Chicago Board Options Exchange.

The Funds will use the market value of its derivatives holdings for the purpose of determining compliance with the 1940 Act and the rules promulgated thereunder. Since the options held by the Funds are exchange-traded, these will be valued on a mark-to-market basis. In the event market prices are not available, the Funds will use fair value pricing pursuant to the fair value procedures adopted by the Board.

Manager of Managers Structure

Although the Funds are not currently sub-advised, the Funds and the Adviser have received exemptive relief from the SEC permitting the Adviser (subject to certain conditions and the approval of the Board) to change or select new unaffiliated sub-advisers without obtaining shareholder approval. The relief also permits the Adviser to materially amend the terms of agreements with an unaffiliated sub-adviser (including an increase in the fee paid by the Adviser to the unaffiliated sub-adviser (and not paid by the Fund)) or to continue the employment of an unaffiliated sub-adviser after an event that would otherwise cause the automatic termination of services with Board approval, but without shareholder approval. Shareholders will be notified of any unaffiliated sub-adviser changes. The Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee a sub-adviser and recommend their hiring, termination and replacement. The exemptive relief applies to sub-advisers that are either wholly-owned by the Adviser or its parent company, as well as to unaffiliated sub-advisers, including those whose affiliation arises solely from their sub-advisory relationship.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in rules under the 1940 Act, subject to certain conditions. The Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Principal Risks of Investing in the Funds

There can be no assurance that the Funds will achieve their respective investment objectives. The following information is in addition to, and should be read along with, the description of each Fund's principal investment risks in the section titled "Fund Summary—Principal Investment Risks" above. Following the Fund-specific Underlying Security risks, the remaining principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Funds, regardless of the order in which it appears.

BABA Risk. The Fund invests in options contracts that are based on the value of BABA. This subjects the Fund to certain of the same risks as if it owned shares of BABA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of BABA, the Fund may also be subject to the following risks:

Indirect Investment in BABA Risk. BABA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of BABA but will be exposed to the performance of BABA (the underlying stock). Investors in the Fund will not have rights

to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

BABA Trading Risk. The trading price of BABA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of BABA may be traded by short sellers which may put pressure on the supply and demand for the common stock of BABA, further influencing volatility in its market price. Public perception and other factors outside of the control of BABA may additionally impact BABA's stock price due to BABA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against BABA in the past. While BABA continues to defend such actions, any judgment against BABA, or any future stockholder litigation could result in substantial costs and a diversion of the management of BABA's attention and resources. If BABA trading is halted, trading in Shares of the BABA Fund may be impacted, either temporarily or indefinitely.

BABA Performance Risk. BABA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of BABA to decline. BABA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance BABA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If BABA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by BABA could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as BABA, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in BABA, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, BABA, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not BABA itself. Though contractual agreements enable BABA to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by BABA's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like BABA, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of BABA's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations. Furthermore, BABA's dependence on Alipay for payment processing and escrow services, its broad exposure to evolving laws and regulations, and the potential misuse or disclosure of data also represent significant business and industry risks.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies

as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

CVNA Risk. The Fund invests in options contracts that are based on the value of CVNA. This subjects the Fund to certain of the same risks as if it owned shares of CVNA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of CVNA, the Fund may also be subject to the following risks:

Indirect Investment in CVNA Risk. CVNA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of CVNA but will be exposed to the performance of CVNA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

CVNA Trading Risk. The trading price of CVNA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of CVNA may be traded by short sellers which may put pressure on the supply and demand for the common stock of CVNA, further influencing volatility in its market price. Public perception and other factors outside of the control of CVNA may additionally impact CVNA's stock price due to CVNA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against CVNA in the past. While CVNA continues to defend such actions, any judgment against CVNA, or any future stockholder litigation could result in substantial costs and a diversion of the management of CVNA's attention and resources. If CVNA trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

CVNA Performance Risk. CVNA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of CVNA to decline. CVNA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance CVNA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If CVNA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by CVNA could decline significantly.

Automotive Industry Risk. The automotive retail industry is subject to significant risks that can impact both profitability and competitiveness. The industry is highly dependent on consumer demand, which can be influenced by various factors such as economic conditions, consumer confidence, fuel prices, and preferences for particular vehicle types. Economic downturns or decreases in consumer spending can lead to reduced vehicle sales, impacting the profitability of automotive retailers. Effective inventory management is essential to avoid excess holding costs, obsolescence, and missed sales opportunities. Additionally, the industry's reliance on auto lending and financing means that changes in interest rates, lending standards, and credit availability can greatly influence consumer purchasing behavior. Regulatory compliance is another crucial aspect, as automotive retailers must adhere to various consumer protection, advertising, financing, and environmental standards, with non-compliance resulting in substantial fines, legal costs, and reputational damage.

DKNG Risk. The Fund invests in options contracts that are based on the value of DKNG. This subjects the Fund to certain of the same risks as if it owned shares of DKNG, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of DKNG, the Fund may also be subject to the following risks:

Indirect Investment in DKNG Risk. DKNG is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions

that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of DKNG but will be exposed to the performance of DKNG (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

DKNG Trading Risk. The trading price of DKNG may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of DKNG may be traded by short sellers which may put pressure on the supply and demand for the common stock of DKNG, further influencing volatility in its market price. Public perception and other factors outside of the control of DKNG may additionally impact DKNG's stock price due to DKNG garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against DKNG in the past. While DKNG continues to defend such actions, any judgment against DKNG, or any future stockholder litigation could result in substantial costs and a diversion of the management of DKNG's attention and resources. If DKNG trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

DKNG Performance Risk. DKNG may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of DKNG to decline. DKNG provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance DKNG provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If DKNG's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by DKNG could decline significantly.

Gaming Industry Risk. The global gaming industry faces intense competition from alternative entertainment options such as television, movies, and sporting events, potentially reducing the popularity of gaming offerings. Success in sports betting and iGaming depends on factors beyond DKNG's control, including sport outcomes, which can impact product performance. Additionally, partnerships with casinos, tribes, and horse-tracks are crucial for offering gaming products in specific jurisdictions, and failure to establish or manage these partnerships could hinder DKNG's gaming business. Moreover, growth prospects are contingent upon the uncertain legalization status of real-money gaming, which may face regulatory restrictions or delays, affecting gaming operations. Obtaining and maintaining gaming licenses in multiple jurisdictions is vital for business growth, and failure to do so could impair DKNG's ability to operate gaming platforms. Negative events or media coverage related to gaming, such as sports betting and iGaming, could also adversely affect user engagement and acquisition, potentially impacting gaming revenues.

General Risks. Economic downturns or reductions in discretionary consumer spending could adversely affect DKNG's gaming revenue, as gaming relies heavily on consumer spending. Risks associated with information technology systems, including failures, errors, or disruptions, pose a threat to DKNG's brand and reputation, as well as disrupting gaming operations. Despite security measures, DKNG's IT infrastructure is vulnerable to cyberattacks or breaches, potentially compromising user data and damaging reputation. Operating in a complex regulatory environment exposes DKNG to legal and regulatory risks, with changes in laws or regulations potentially impacting gaming operations and expansion plans. Investing in or acquiring other gaming businesses poses integration risks, affecting DKNG's overall performance. Being subject to taxation in multiple jurisdictions exposes DKNG to additional tax liabilities due to changes in tax laws or interpretations, affecting financial performance. The company's stock price may experience volatility, risking potential loss for investors due to fluctuations in market conditions. Additionally, as a controlled company, shareholders may lack certain corporate governance protections, potentially impacting investor confidence.

HOOD Risk. The Fund invests in options contracts that are based on the value of HOOD. This subjects the Fund to certain of the same risks as if it owned shares of HOOD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of HOOD, the Fund may also be subject to the following risks:

Indirect Investment in HOOD Risk. HOOD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of HOOD but will be exposed to the performance of HOOD (the underlying stock). Investors in the Fund will not

have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

HOOD Trading Risk. The trading price of HOOD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of HOOD may be traded by short sellers which may put pressure on the supply and demand for the common stock of HOOD, further influencing volatility in its market price. Public perception and other factors outside of the control of HOOD may additionally impact HOOD's stock price due to HOOD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against HOOD in the past. While HOOD continues to defend such actions, any judgment against HOOD, or any future stockholder litigation could result in substantial costs and a diversion of the management of HOOD's attention and resources. If HOOD trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

HOOD Performance Risk. HOOD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of HOOD to decline. HOOD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance HOOD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If HOOD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by HOOD could decline significantly.

HOOD Operational Risks. HOOD's plans to venture into new international markets introduces significant uncertainties that may not yield desired outcomes. Operations are subject to complex and evolving laws, with non-compliance posing threats to HOOD's business. Past and potential future regulatory investigations, settlements, and litigation could lead to substantial costs and reputational damage. Intense competition from rivals with greater resources threatens HOOD's market position and revenue. Failure to retain existing customers or attract new ones, coupled with reduced usage of products and services, may result in declining revenue. Moreover, failure to develop and monetize innovative offerings could diminish competitiveness and revenue streams.

Dependence on complex software and systems entails the risk of interruptions, instability, and flaws, potentially disrupting operations. Reliance on third-party entities for critical functions exposes the company to risks associated with their performance. Additionally, incorporating AI technologies presents business, compliance, and reputational risks. Cybersecurity breaches targeting the company's systems or customer data could lead to significant financial and reputational damage. Failure to maintain required net capital levels may result in restrictions and regulatory actions.

Risks associated with the effectiveness of compliance and risk management policies and procedures may impact operations under different market conditions. Operating in the highly volatile cryptocurrency market exposes the company to uncertainties and fluctuations affecting trading volumes and revenues.

Regulatory uncertainties surrounding cryptocurrency classification and compliance could lead to scrutiny, fines, and penalties. The complexity of rapidly evolving and difficult-to-interpret cryptocurrency laws and regulations poses challenges and compliance risks. Offering payment and spending services introduces risks related to illegal payments, customer asset loss, disputes, and liabilities. Future issuances of stock may lead to significant dilution, impacting shareholder value. Lastly, concentrated voting power with founders and multi-class stock structures limit shareholder influence over company decisions.

Financial Exchanges and Data Industry Risks. The industry is highly susceptible to fluctuations in economic conditions, changes in market sentiment, and regulatory alterations, which can significantly affect market volatility and trading volumes. Technological disruptions or failures, including cybersecurity breaches, could compromise user data and disrupt trading activities, potentially leading to financial losses for both the company and its users. Additionally, the competitive landscape, with rapid technological advancements and the emergence of new competitors, could impact HOOD's market share and profitability. Such factors could adversely affect HOOD's business performance and stock price and, in turn, negatively impact the Fund.

Global Crypto Asset Trading Platform Risks. HOOD has announced plans to expand its crypto asset business. Such an expansion will subject HOOD to risks related to regulatory compliance, such as the potential for increased scrutiny, enhanced

anti-money laundering (AML) and know your customer (KYC) requirements, and the need for additional licenses in various jurisdictions. Operational risks will also arise from the complexities of integrating the new platform's operations, technology, and culture, as well as the need to bolster system security and manage a more extensive technology infrastructure. Market risks, including high volatility and liquidity management challenges, will become more pronounced. Reputational risks could emerge from potential security breaches, operational failures, or regulatory violations, affecting customer trust and market perception. Legal risks may increase due to potential litigation and intellectual property issues. Additionally, HOOD will be subject to financial risks associated with the capital investment required for the expansion.

JD Risk. The Fund invests in options contracts that are based on the value of JD. This subjects the Fund to certain of the same risks as if it owned shares of JD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of JD, the Fund may also be subject to the following risks:

Indirect Investment in JD Risk. JD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of JD but will be exposed to the performance of JD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

JD Trading Risk. The trading price of JD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of JD may be traded by short sellers which may put pressure on the supply and demand for the common stock of JD, further influencing volatility in its market price. Public perception and other factors outside of the control of JD may additionally impact JD's stock price due to JD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. If JD trading is halted, trading in Shares of the JD Fund may be impacted, either temporarily or indefinitely.

JD Performance Risk. JD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of JD to decline. JD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance JD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If JD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by JD could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as JD, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in JD, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, JD, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not JD itself. Though contractual agreements enable JD to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company

rather than equity securities issued by JD's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like JD, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of JD's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

MARA Risk. The Fund invests in options contracts that are based on the value of MARA. This subjects the Fund to certain of the same risks as if it owned shares of MARA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of MARA, the Fund may also be subject to the following risks:

Indirect Investment in MARA Risk. MARA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of MARA but will be exposed to the performance of MARA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

MARA Trading Risk. The trading price of MARA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of MARA may be traded by short sellers which may put pressure on the supply and demand for the common stock of MARA, further influencing volatility in its market price. Public perception and other factors outside of the control of MARA may additionally impact MARA's stock price due to MARA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against MARA in the past. While MARA continues to defend such actions, any judgment against MARA, or any future stockholder litigation could result in substantial costs and a diversion of the management of MARA's attention and resources. If MARA trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

MARA Performance Risk. MARA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of MARA to decline. MARA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance MARA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If MARA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by MARA could decline significantly.

Bitcoin Mining Industry & Bitcoin Risks.

Companies in the Bitcoin mining industry are subject to inherent technological and operational risks. MARA's operations, which include validating transactions and securing the network, are heavily dependent on energy consumption, making

MARA's profitability susceptible to fluctuations in energy prices and potential regulatory changes affecting energy usage. The concentration of mining operations in regions with lower energy costs can also expose the company to local political and economic instability, potentially disrupting operations. Technological changes or advancements in mining algorithms can render MARA's existing equipment obsolete, leading to significant capital losses. Moreover, as the reward for mining new blocks diminishes over time, the financial incentive to continue mining may decrease, potentially reducing MARA's profitability and affecting its operational viability.

Bitcoin's price is highly volatile, and its market is influenced by the changing Bitcoin network, fluctuating acceptance levels, and unpredictable usage trends. Not being a legal tender and operating outside central authority systems like banks, Bitcoin faces potential government restrictions. For instance, some countries may limit or ban Bitcoin transactions, negatively impacting its market value.

The risks associated with Bitcoin include the possibility of fraud, theft, market manipulation, and security breaches in trading platforms. A small group of large Bitcoin holders, known as "whales," can significantly influence Bitcoin's price. The largely unregulated nature of Bitcoin and its trading venues heightens risks of fraudulent activities and market manipulation, which could affect Bitcoin's price. For example, if a group of miners gains control over a majority of the Bitcoin network, they could manipulate transactions to their advantage. Historical instances have seen Bitcoin trading venues shut down due to fraud or security breaches, often leaving investors without recourse and facing significant losses.

Updates to Bitcoin's software, proposed by developers, can lead to the creation of new digital assets, or "forks," if not broadly adopted. This can impact Bitcoin's demand and the Fund's performance. The extreme volatility of Bitcoin's market price can result in shareholder losses. Furthermore, the operation of Bitcoin exchanges may be disrupted or cease altogether due to various issues, further affecting Bitcoin's price and the Fund's investments.

The value of Bitcoin has historically been subject to significant speculation, making trading and investing in Bitcoin reliant on market sentiment rather than traditional fundamental analysis.

Bitcoin's price can be influenced by events unrelated to its security or utility, including instability in other speculative areas of the crypto/blockchain space, potentially leading to substantial declines in its value.

Risks associated with crypto asset trading platforms include fragmentation, regulatory non-compliance, and the possibility of enforcement actions by regulatory authorities, which could impact the valuation of Bitcoin-linked derivatives held by the Underlying ETPs.

The security of the Bitcoin blockchain may be compromised if a single miner or group controls more than 50% of the network's hashing power, where hashing power refers to the computational capacity used to validate and secure transactions on the blockchain.

Proposed changes to the Bitcoin protocol may not be universally adopted, leading to the creation of competing blockchains (forks) with different assets and participants, exemplified by past forks like Bitcoin Cash and Bitcoin SV.

The Bitcoin blockchain protocol may contain vulnerabilities that attackers could exploit to disrupt its operation, potentially compromising the security and reliability of the network.

Emerging alternative public blockchains, particularly those emphasizing privacy through technologies like zero-knowledge cryptography, pose risks and challenges to the dominance of the Bitcoin blockchain as a payment system.

Common impediments to adopting the Bitcoin blockchain as a payment network include slow transaction processing, variability in transaction fees, and the volatility of Bitcoin's price, which may deter widespread adoption by businesses and consumers.

The development and use of "Layer II solutions" are critical for the scalability and functionality of the Bitcoin blockchain, but they also introduce risks such as off-chain transaction execution, which could affect transparency and security. Layer II solutions are off-chain protocols that improve scalability and reduce transaction costs by processing transactions outside the main blockchain network.

Adoption and use of other blockchains supporting advanced applications like smart contracts present challenges to the dominance of the Bitcoin blockchain, potentially impacting its long-term relevance and utility in the evolving landscape of blockchain technology.

- **Digital Assets Risk:** Digital assets like Bitcoin, designed as mediums of exchange, are still an emerging asset class. They operate independently of any central authority or government backing and are subject to regulatory changes and extreme price volatility. The trading platforms for digital assets are relatively new, largely unregulated, and thus more vulnerable to fraud and failures compared to traditional, regulated exchanges. Shutdowns of these platforms due to fraud, technical glitches, or security issues can significantly affect digital asset prices and market volatility.

- **Digital Asset Markets Risk:** The digital asset market, particularly Bitcoin, has experienced considerable volatility, leading to market disruptions and erosion of confidence among market participants. This instability and the resultant negative publicity could adversely affect the Fund's reputation and trading prices. Ongoing market turbulence could significantly impact the value of the Fund's share.
- **Blockchain Technology Risk:** Blockchain technology, which underpins Bitcoin and other digital assets, is relatively new, and many of its applications are untested. The adoption of blockchain and the development of competing platforms or technologies could affect its usage. Investments in companies or vehicles that utilize blockchain technology are subject to market volatility and may experience lower trading volumes compared to more established industries. Additionally, regulatory changes, internet disruptions, cybersecurity incidents, and intellectual property disputes could further affect the adoption and functionality of blockchain technology.

PDD Risk. The Fund invests in options contracts that are based on the value of PDD. This subjects the Fund to certain of the same risks as if it owned shares of PDD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of PDD, the Fund may also be subject to the following risks:

Indirect Investment in PDD Risk. PDD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of PDD but will be exposed to the performance of PDD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

PDD Trading Risk. The trading price of PDD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of PDD may be traded by short sellers which may put pressure on the supply and demand for the common stock of PDD, further influencing volatility in its market price. Public perception and other factors outside of the control of PDD may additionally impact PDD's stock price due to PDD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against PDD in the past. While PDD continues to defend such actions, any judgment against PDD, or any future stockholder litigation could result in substantial costs and a diversion of the management of PDD's attention and resources. If PDD trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

PDD Performance Risk. PDD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of PDD to decline. PDD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance PDD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If PDD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by PDD could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as PDD, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that

operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in PDD, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, PDD, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not PDD itself. Though contractual agreements enable PDD to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by PDD's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like PDD, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of PDD's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

PLTR Risk. The Fund invests in options contracts that are based on the value of PLTR. This subjects the Fund to certain of the same risks as if it owned shares of PLTR, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of PLTR, the Fund may also be subject to the following risks:

Indirect Investment in PLTR Risk. PLTR is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of PLTR but will be exposed to the performance of PLTR (the Underlying Security). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

PLTR Trading Risk. The trading price of PLTR may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of PLTR may be traded by short sellers which may put pressure on the supply and demand for the common stock of PLTR, further influencing volatility in its market price. Public perception and other factors outside of the control of PLTR may additionally impact PLTR's stock price due to PLTR garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against PLTR in the past. While PLTR continues to defend such actions, any judgment against PLTR, or any future stockholder litigation could result in substantial costs and a diversion of the management of PLTR's attention and resources. If PLTR trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

PLTR Performance Risk. PLTR may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of PLTR to decline. PLTR provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance PLTR provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which

generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If PLTR's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by PLTR could decline significantly.

Software Industry Risk. The software industry can be significantly affected by intense competition, aggressive pricing, technological innovations, and product obsolescence. Companies in the software industry are subject to significant competitive pressures, such as aggressive pricing, new market entrants, competition for market share, short product cycles due to an accelerated rate of technological developments and the potential for limited earnings and/or falling profit margins. These companies also face the risks that new services, equipment or technologies will not be accepted by consumers and businesses or will become rapidly obsolete. These factors can affect the profitability of these companies and, as a result, the value of their securities. Also, patent protection is integral to the success of many companies in this industry, and profitability can be affected materially by, among other things, the cost of obtaining (or failing to obtain) patent approvals, the cost of litigating patent infringement and the loss of patent protection for products (which significantly increases pricing pressures and can materially reduce profitability with respect to such products). In addition, many software companies have limited operating histories. Prices of these companies' securities historically have been more volatile than other securities, especially over the short term.

AI Platform Risk. PLTR has launched an AI (artificial intelligence) platform, which subjects PLTR to additional risks, including challenges in developing and deploying new technologies to meet customer needs and ensuring compatibility with third-party products and services. PLTR may struggle to hire, retain, and train qualified personnel, which is crucial for meeting customer demand. The use of AI could lead to reputational harm or liability issues, and there may be difficulties in obtaining, maintaining, protecting, and enforcing intellectual property rights. Additionally, the platform could encounter real or perceived errors, failures, defects, or bugs, and reliance on third-party technology could pose risks if it becomes difficult to replace or causes errors. Finally, PLTR's AI platform will be subject to complex and evolving U.S. and non-U.S. laws and regulations regarding privacy, data protection, security, and technology protection.

RBLX Risk. The Fund invests in options contracts that are based on the value of RBLX. This subjects the Fund to certain of the same risks as if it owned shares of RBLX, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of RBLX, the Fund may also be subject to the following risks:

Indirect Investment in RBLX Risk. RBLX is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of RBLX but will be exposed to the performance of RBLX (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

RBLX Trading Risk. The trading price of RBLX may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of RBLX may be traded by short sellers which may put pressure on the supply and demand for the common stock of RBLX, further influencing volatility in its market price. Public perception and other factors outside of the control of RBLX may additionally impact RBLX's stock price due to RBLX garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against RBLX in the past. While RBLX continues to defend such actions, any judgment against RBLX, or any future stockholder litigation could result in substantial costs and a diversion of the management of RBLX's attention and resources. If RBLX trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

Operational and Execution Risks: RBLX is subject to various risks, including dependence on user engagement, as its success hinges on retaining a large and active user base whose preferences may shift. The company must also effectively manage and moderate user-generated content to prevent the dissemination of inappropriate material, which could tarnish its reputation and deter users. Ensuring robust platform security and privacy is crucial, especially given its predominantly young audience, with failures potentially leading to legal issues and a loss of trust. Regulatory changes in data privacy, consumer protection, and online safety present ongoing challenges. Additionally, Roblox operates in a competitive, rapidly evolving industry, necessitating continual technological innovation to stay ahead. The company's revenue heavily relies on in-platform purchases using its virtual currency, making it vulnerable to changes in monetization strategies or disruptions in payment systems, highlighting the importance of adapting to maintain growth and sustainability in the online gaming and content creation market.

Interactive Media and Services Industry Risks: The interactive media and services industry faces significant risks due to intense market competition, evolving regulatory environments, and reliance on advanced technology and infrastructure. Companies

must navigate a complex landscape where technological advancements and new entrants constantly introduce competitive pressures. Regulatory changes, particularly those related to data privacy, content moderation, and intellectual property, can impose substantial compliance costs and legal liabilities. Additionally, the industry depends heavily on the security and reliability of its technological infrastructure; any disruptions or breaches can lead to operational challenges and compromised user information. Attracting, engaging, and retaining users is crucial for success, and failure to manage content moderation effectively can result in legal, regulatory, and reputational risks.

Economic conditions, international operations, and the need for continuous innovation further complicate the industry's risk profile. Economic downturns and fluctuations in consumer spending can reduce demand for interactive media and services, affecting revenue and profitability. Operating globally exposes companies to political instability, currency fluctuations, and varying regulatory standards. The industry must invest in research and development to stay competitive, but these investments come with no guarantees of success. Additionally, cybersecurity threats pose a significant risk, with potential for data breaches and financial losses. Implementing robust cybersecurity measures is essential to mitigate these threats and protect valuable digital assets.

SHOP Risk. The Fund invests in options contracts that are based on the value of SHOP. This subjects the Fund to certain of the same risks as if it owned shares of SHOP, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of SHOP, the Fund may also be subject to the following risks:

Indirect Investment in SHOP Risk. SHOP is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of SHOP but will be exposed to the performance of SHOP (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

SHOP Trading Risk. The trading price of SHOP may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of SHOP may be traded by short sellers which may put pressure on the supply and demand for the common stock of SHOP, further influencing volatility in its market price. Public perception and other factors outside of the control of SHOP may additionally impact SHOP's stock price due to SHOP garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against SHOP in the past. While SHOP continues to defend such actions, any judgment against SHOP, or any future stockholder litigation could result in substantial costs and a diversion of the management of SHOP's attention and resources. If SHOP trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

SHOP Performance Risk. SHOP may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of SHOP to decline. SHOP provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance SHOP provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If SHOP's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by SHOP could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as SHOP, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that

operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

SMCI Risk. The Fund invests in options contracts that are based on the value of SMCI. This subjects the Fund to certain of the same risks as if it owned shares of SMCI, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of SMCI, the Fund may also be subject to the following risks:

Indirect Investment in SMCI Risk. SMCI is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of SMCI but will be exposed to the performance of SMCI (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

SMCI Trading Risk. The trading price of SMCI may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of SMCI may be traded by short sellers which may put pressure on the supply and demand for the common stock of SMCI, further influencing volatility in its market price. Public perception and other factors outside of the control of SMCI may additionally impact SMCI's stock price due to SMCI garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against SMCI in the past. While SMCI continues to defend such actions, any judgment against SMCI, or any future stockholder litigation could result in substantial costs and a diversion of the management of SMCI's attention and resources. If SMCI trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

Operational and Execution Risks: SMCI faces several operational and execution risks that could adversely impact its business operations and financial performance. Adverse economic conditions may harm the company's overall business, while recent events in eastern Europe and the Taiwan Strait pose additional challenges and uncertainties. Fluctuations in quarterly operating results, unpredictability in revenue and margins, and the concentration of larger customers and sales opportunities are factors contributing to operational volatility. Additionally, failure to meet financial guidance, challenges in securing favorable financing, and risks associated with inventory management and supply chain disruptions further compound these risks. Cybersecurity threats, difficulties in expanding and retaining the sales force, and potential conflicts of interest with affiliated companies add complexity to operational management. Moreover, reliance on key personnel, potential confusion in sales channels, and challenges in attracting and integrating key employees also contribute to operational uncertainties.

Strategic and Industry Risks: Expanding international operations, managing growth effectively, and responding to technological trends are critical strategic challenges for SMCI. The company operates in a highly competitive market, and industry consolidation could intensify competition. Dependence on suppliers, indirect sales channels, and the need for continuous product innovation further highlight industry-specific risks. Quality control issues, fluctuations in corporate ventures, and challenges in managing international business operations also pose strategic concerns for SMCI.

Additional & Technology-Related Risks. SMCI faces additional risks specific to its operations, including significant reliance on a limited number of key suppliers, which could disrupt production if supply chain issues arise. SMCI is also vulnerable to rapid technological changes in the industry, necessitating continuous innovation and investment in research and development. SMCI's global operations expose it to geopolitical risks, currency fluctuations, and compliance with diverse regulatory environments. Moreover, SMCI's dependence on key personnel means that the loss of any critical team members could adversely affect its business.

Delisting Risk. SMCI announced in 2024 that it received a notification letter from Nasdaq stating that SMCI is not in compliance with Nasdaq listing rule 5250(c)(1), which requires timely filing of reports with the U.S. Securities and Exchange Commission. The letter, dated September 17, 2024, was sent as a result of SMCI's delay in filing its Annual Report on Form 10-K for the period ending June 30, 2024 (the "Form 10-K"). SMCI subsequently filed its Form 10-K and its Quarterly Reports on Form 10-Q for the first two quarters of its 2025 fiscal year on February 25, 2025 and is therefore back in compliance; however, should SMCI fail to comply with the rule within required timelines going forward it's possible SMCI stock could be delisted which would prevent the Fund from continuing to operate.

TSM Risk. The Fund invests in options contracts that are based on the value of TSM. This subjects the Fund to certain of the same risks as if it owned shares of TSM, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of TSM, the Fund may also be subject to the following risks:

Indirect Investment in TSM Risk. TSM is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of TSM but will be exposed to the performance of TSM (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

TSM Trading Risk. The trading price of TSM may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of TSM may be traded by short sellers which may put pressure on the supply and demand for the common stock of TSM, further influencing volatility in its market price. Public perception and other factors outside of the control of TSM may additionally impact TSM's stock price due to TSM garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against TSM in the past. While TSM continues to defend such actions, any judgment against TSM, or any future stockholder litigation could result in substantial costs and a diversion of the management of TSM's attention and resources. If TSM trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

TSM Performance Risk. TSM may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of TSM to decline. TSM provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance TSM provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If TSM's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by TSM could decline significantly.

Semiconductor Company Risk. Competitive pressures may have a significant effect on the financial condition of semiconductor companies and, as product cycles shorten and manufacturing capacity increases, these companies may become increasingly subject to aggressive pricing, which hampers profitability. Reduced demand for end-user products, under-utilization of manufacturing capacity, and other factors could adversely impact the operating results of companies in the semiconductor sector. Semiconductor companies typically face high capital costs and may be heavily dependent on intellectual property rights. The semiconductor sector is highly cyclical, which may cause the operating results of many semiconductor companies to vary significantly. The stock prices of companies in the semiconductor sector have been and likely will continue to be extremely volatile.

Geopolitical Risks. TSM is subject to substantial geopolitical risks due to the complex and often tense relationship between Taiwan and China. The potential for military conflict or increased political pressure from China poses a substantial threat to TSM's operations and supply chain stability. Additionally, any escalation in cross-strait tensions could lead to economic sanctions, trade restrictions, or other regulatory measures that might disrupt TSM's business activities and international partnerships. TSM's reliance on global markets also means that geopolitical instability could affect investor confidence and result in fluctuations in its share price and market value. Furthermore, TSM's operational concentration in Taiwan makes it particularly vulnerable to regional political and military developments, which could severely impact its production capabilities and overall business continuity.

Call Strategy Risks. The path dependency (i.e., the continued use) of each Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month a Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both a Fund's participation in the positive price returns of an Underlying Security and its returns will depend not only on the price the Underlying Security but also on the path that such security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium

received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Counterparty Risk. Each Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, a Fund's counterparty is a clearing house rather than a bank or broker. Since the Funds are not members of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Funds will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, a Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by a Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of a Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of a Fund might not be fully protected in the event of the clearing member's bankruptcy, as a Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. Each Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Funds as they seek to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Funds' behalf. If a clearing member defaults a Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If a Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Derivatives Risk. The Funds' derivative investments have risks, including the imperfect correlation between the value of such instruments and the underlying assets; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; the possible default of the other party to the transaction; and illiquidity of the derivative investments. Use of derivatives could also result in a loss if the counterparty to the transaction does not perform as promised, including because of such counterparty's bankruptcy or insolvency. This risk may be greater during volatile market conditions. Other risks include the inability to close out a position because the trading market becomes illiquid (particularly in the OTC markets) or the availability of counterparties becomes limited for a period of time. In addition, the presence of speculators in a particular market could lead to price distortions.

Certain of the Funds' transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in a Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact such Fund's after-tax returns.

In addition, each Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For each of the Funds, the value of the options contracts in which the Fund invests are substantially influenced by the value of the applicable Underlying Security. The Funds may experience substantial downside from specific option positions and certain option positions held by a Fund may expire worthless. The options held by the Funds are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the reference asset, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Funds will be determined based on market quotations or other recognized pricing methods. Additionally, as each Fund intends to continuously maintain indirect exposure to the applicable Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, a Fund may experience losses.

Distribution Risk. As part of the Funds' investment objectives, the Funds seek to provide current monthly income. There is no assurance that the Funds will make a distribution in any given month. If a Fund makes distributions, the amounts of such distributions will likely

vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

ETF Risk.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Funds have a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. Each Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, a Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, a Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, a Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on a Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of a Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as the Exchange, and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above a Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of a Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security's securities being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, a Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

Foreign Investment Risk. Because each of YieldMax™ BABA Option Income Strategy ETF, YieldMax™ JD Option Income Strategy ETF, YieldMax™ PDD Option Income Strategy ETF, YieldMax™ SHOP Option Income Strategy ETF, and YieldMax™ TSM Option Income Strategy ETF has indirect exposure to the stock or ADR of a foreign company, each such Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Depositary Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.

- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

High Portfolio Turnover Risk. The Funds may actively and frequently trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase a Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Funds due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Funds, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater to the Funds as they will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If a Fund is forced to sell an illiquid security at an unfavorable time or price, such Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent a Fund from limiting losses, realizing gains or achieving a high correlation with the applicable Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Funds.

Money Market Instrument Risk. The Funds may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

NAV Erosion Risk Due to Distributions. If a Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions, if any, by a Fund may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

New(er) Fund Risk. Each Fund is recently organized with no or limited operating history. As a result, prospective investors do not have or have a limited track record or history on which to base their investment decisions. There can be no assurance that the Funds will grow to or maintain an economically viable size.

Non-Diversification Risk. Because each Fund is "non-diversified," a Fund may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause a Fund's overall value to decline to a greater degree than if such Fund held a more diversified portfolio. This may increase the Fund's volatility and have a greater impact on such Fund's performance. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. Each Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Funds' service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect a Fund's ability to meet its investment objective. Although the Funds and the Funds' investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Price Participation Risk. Each Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which such Fund will participate in increases in value experienced by the applicable Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the applicable Fund will likely not experience that increase to the same extent and may significantly underperform such Underlying Security over the Call Period. Additionally, because each Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. Each Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in Underlying Security gains a Fund will experience will depend on prevailing market conditions, especially

market volatility, at the time such Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore a Fund's NAV, will change. However, it is not expected for a Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the option contract's expiration date affects the impact of the potential options contract income on a Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to a Fund's NAV, the Funds generally anticipate that the rate of change in a Fund's NAV will be different than that experienced by the Underlying Security.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Significant market volatility and market downturns may limit the Funds' ability to sell securities and obtain long exposure to securities, and a Funds' sales and long exposures may exacerbate the market volatility and downturn. Under such circumstances, a Fund may have difficulty achieving its investment objective for one or more trading days, which may adversely impact a Fund's returns on those days and periods inclusive of those days. Alternatively, a Fund may incur higher costs in order to achieve its investment objective and may be forced to purchase and sell securities (including other ETFs' shares) at market prices that do not represent their fair value (including in the case of an ETF, its NAV) or at times that result in differences between the price such Fund receives for the security and the market closing price of the security. Under those circumstances, a Fund's ability to track the applicable Underlying Security is likely to be adversely affected, the market price of Shares may reflect a greater premium or discount to NAV and bid-ask spreads in Shares may widen, resulting in increased transaction costs for secondary market purchasers and sellers.

Single Issuer Risk. Issuer-specific attributes may cause an in a Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of a Fund, which focuses on an Underlying Security, may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Funds may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

PORTFOLIO HOLDINGS

Information about each Fund's daily portfolio holdings is, or will be, available on the Funds' website at www.yieldmaxetfs.com.

A complete description of each Fund’s policies and procedures with respect to the disclosure of a Fund’s portfolio holdings is available in the Funds’ SAI.

MANAGEMENT

Investment Adviser

Tidal Investments LLC (the “Adviser”), located at 234 West Florida Street, Suite 203, Milwaukee, Wisconsin 53204, is an SEC registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and is dedicated to understanding, researching and managing assets within the expanding ETF universe. As of January 31, 2025, Tidal had assets under management of approximately \$29.72 billion and served as the investment adviser or sub-adviser for 194 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the “Advisory Agreement”). The Adviser is responsible for trading portfolio securities for each Fund, including selecting broker-dealers to execute purchase and sale transactions. The Adviser also arranges for sub-advisory, transfer agency, custody, fund administration, and all other related services necessary for the Fund to operate. For the services provided to the Funds, each Fund pays the Adviser a unitary management fee of 0.99%, which is calculated daily and paid monthly, at an annual rate based on such Fund’s average daily net assets.

Under the Advisory Agreement, in exchange for a single unitary management fee from the Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for its advisory fee, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and expenses paid by a Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unitary management fee payable to the Adviser (collectively, the “Excluded Expenses”).

Advisory Agreement

A discussion regarding the basis for the Board’s most recent approval of a Fund Advisory Agreement is available in the October 31, 2024 Certified Shareholder Report on Form N-CSR.

Portfolio Managers

The following individuals (each, a “Portfolio Manager”) have served as portfolio managers of each Fund since inception in 2024 or 2025, as applicable. Mr. Pestrighelli is primarily responsible for the day-to-day management of each Fund, and Ms. Duan and Mr. Mullen oversee trading and execution for each Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser

Mr. Pestrighelli joined the Adviser in 2025 and is Chief Trading Officer of the Adviser’s ETF Trading and Portfolio Management team. Mr. Pestrighelli has over 30 years of experience in the financial markets. Prior to joining the Adviser, Mr. Pestrighelli co-founded ZEGA Financial, LLC (“ZEGA”) where he led the development and execution of ZEGA’s investment strategies since its inception in 2011. He is also the author of the best-selling book “Buy & Hedge: The Five Iron Rules for Investing Over the Long Term.” Prior to founding ZEGA, Mr. Pestrighelli spent 12 years managing and growing the online trading business for TD Ameritrade from 1999 to 2010. Mr. Pestrighelli has a Bachelor degree in Behavioral Science from Concordia College.

Qiao Duan, CFA, Portfolio Manager for the Adviser

Qiao Duan serves as Portfolio Manager at the Adviser, having joined the firm in October 2020. From February 2017 to October 2020, she was an execution Portfolio Manager at Exponential ETFs, where she managed research and analysis relating to all Exponential ETF strategies. Ms. Duan previously served as a portfolio manager for the Exponential ETFs from their inception in May 2019 until October 2020. Ms. Duan received a Master of Science in Quantitative Finance and Risk Management from the University of Michigan in 2016 and a Bachelor of Science in Mathematics and Applied Mathematics from Xiamen University in 2014. She holds the CFA designation.

Christopher P. Mullen, Portfolio Manager for the Adviser

Christopher P. Mullen serves as Portfolio Manager at the Adviser, having joined the firm in January 2024. From September 2019 to December 2023, he was a Portfolio Manager at Vest Financial LLC, where he managed exchange-traded funds, mutual funds and retirement fund portfolios. Mr. Mullen previously served as a Senior Portfolio Analyst at ProShares Advisors LLC from September 2016 until September 2019. Prior to that, Mr. Mullen served as associate portfolio manager at USCF Investments LLC from February 2013 to September 2016. Mr. Mullen received a Master of Business Administration from the University of Maryland. He also holds a dual bachelor’s degree in global politics and history from Marquette University.

CFA® is a registered trademark owned by the CFA Institute.

The Funds' SAI provides additional information about each portfolio manager's compensation structure, other accounts that each portfolio manager manages, and each portfolio manager's ownership of Shares.

Fund Supporters

The Adviser, Tidal ETF Services LLC, ZEGA, Lucania Investments LLC ("Lucania"), and Level ETF Ventures LLC ("Level," and together with the Adviser, ZEGA and Lucania, the "Supporters" and each a "Supporter") have entered into a fund support agreement pursuant to which each Supporter has agreed to provide financial support (as described below) to the Funds. Every month, the unitary management fees for each Fund are calculated and paid to the Adviser, and the Adviser retains a portion of the unitary management fees from each Fund. In return for its financial support for the Funds, the Adviser has agreed to pay each Supporter a portion of any remaining profits generated by the unitary management fees for the Funds. If the aggregate amount of the unitary management fees for the Funds exceeds the aggregate of the Funds' operating expenses and the Adviser-retained amounts, that excess amount is considered "remaining profit." In that case, the Adviser will pay a portion of the remaining profits to the Supporters. Further, if the aggregate amount of the unitary management fees for the Funds is less than the aggregate of Funds' operating expenses and the Adviser-retained amounts, each Supporter is obligated to reimburse the Adviser for a portion of the shortfall.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to the Funds, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by a Fund's transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

In order to purchase Creation Units of a Fund, an AP must generally deposit a designated portfolio of equity securities (the "Deposit Securities") and/or a designated amount of U.S. cash. Purchases and redemptions of Creation Units primarily with cash, rather than through in-kind delivery of portfolio securities, may cause the Funds to incur certain costs. These costs could include brokerage costs or taxable gains or losses that it might not have incurred if it had made redemption in-kind. These costs could be imposed on a Fund, and thus decrease the Fund's NAV, to the extent that the costs are not offset by a transaction fee payable by an AP.

Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or "street name" through your brokerage account.

Frequent Purchases and Redemptions of Shares

None of the Funds imposes any restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by a Fund's shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with a Fund, are an essential part of the ETF process and help keep Share trading prices in line with the NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, each Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by such Fund in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for the Funds is calculated by dividing such Fund's net assets by its Shares outstanding.

In calculating its NAV, each Fund generally value its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security held by a Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Adviser (as described below).

Fair Value Pricing

The Board has designated the Adviser as the "valuation designee" for the Fund under Rule 2a-5 of the 1940 Act, subject to its oversight. The Adviser has adopted procedures and methodologies, which have been approved by the Board, to fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment's primary pricing source is unable or unwilling to provide a price; (iii) an investment's primary trading market is closed during regular market hours; or (iv) an investment's value is materially affected by events occurring after the close of the investment's primary trading market. Generally, when fair valuing an investment, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Adviser-adopted valuation procedures. The Adviser will fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Funds intend to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually.

The Funds will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a regulated investment company (a "RIC") under the Internal Revenue Code of 1986, as amended. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions. Each Fund intends to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually. For federal income tax purposes, distributions of net investment income are generally taxable as ordinary income. Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by such Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains. Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations. Given the investment strategies of the Funds, it is unlikely that any dividends paid by a Fund will be qualified dividends or be eligible for the corporate dividends paid deduction.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income ("NII") tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer's investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer's modified adjusted gross income exceeds certain thresholds (\$250,000 for married individuals filing jointly, \$200,000 for unmarried individuals and \$125,000 for married individuals filing separately). Each Fund's distributions are includable in a shareholder's investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of shares of a Fund is includable in such shareholder's investment income for purposes of this NII tax.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Funds may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act ("FATCA"), the Funds may be required to withhold a generally nonrefundable 30% tax on distributions of net taxable income paid to (A) certain "foreign financial institutions" unless such foreign financial institution agrees to verify, monitor, and report to the Internal Revenue Service ("IRS") the identity of certain of its account-holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution's country of residence), and (B) certain "non-financial foreign entities" unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. This FATCA withholding tax could also affect a Fund's return on its investments in foreign securities or affect a shareholder's return if the shareholder holds its Fund shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

Each Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that they are not subject to such withholding.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Funds to recognize investment income and/or capital gains or losses that they might not have recognized if they had completely satisfied the redemption in-kind. As a result, the Funds may be less tax efficient if they include such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC, a wholly owned subsidiary of Foreside Financial Group (dba ACA Group) (the "Distributor"), the Funds' distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Funds are authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of assets of the respective Fund on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often Shares of the Funds traded on the Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of such Fund can be found on the Funds' website at www.yieldmaxetfs.com.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser, ZEGA, Lucania, Level, and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in any Fund particularly.

The Third Amended and Restated Declaration of Trust (“Declaration of Trust”) provides a detailed process for the bringing of derivative or direct actions by shareholders in order to permit legitimate inquiries and claims while avoiding the time, expense, distraction, and other harm that can be caused to a Fund or its shareholders as a result of spurious shareholder demands and derivative actions. Prior to bringing a derivative action, a demand by three unrelated shareholders must first be made on a Fund’s Trustees. The Declaration of Trust details various information, certifications, undertakings and acknowledgments that must be included in the demand. Following receipt of the demand, the trustees have a period of 90 days, which may be extended by an additional 60 days, to consider the demand. If a majority of the Trustees who are considered independent for the purposes of considering the demand determine that maintaining the suit would not be in the best interests of the Fund, the Trustees are required to reject the demand and the complaining shareholders may not proceed with the derivative action unless the shareholders are able to sustain the burden of proof to a court that the decision of the Trustees not to pursue the requested action was not a good faith exercise of their business judgment on behalf of the Fund. The Declaration of Trust further provides that shareholders owning Shares representing no less than a majority of a Fund’s outstanding shares must join in bringing the derivative action. If a demand is rejected, the complaining shareholders will be responsible for the costs and expenses (including attorneys’ fees) incurred by the Fund in connection with the consideration of the demand, if a court determines that the demand was made without reasonable cause or for an improper purpose. If a derivative action is brought in violation of the Declaration of Trust, the shareholders bringing the action may be responsible for the Fund’s costs, including attorneys’ fees, if a court determines that the action was brought without reasonable cause or for an improper purpose. The Declaration of Trust provides that no shareholder may bring a direct action claiming injury as a shareholder of the Trust, or any Fund, where the matters alleged (if true) would give rise to a claim by the Trust or by the Trust on behalf of a Fund, unless the shareholder has suffered an injury distinct from that suffered by the shareholders of the Trust, or the Fund, generally. Under the Declaration of Trust, a shareholder bringing a direct claim must be a shareholder of the Fund with respect to which the direct action is brought at the time of the injury complained of or have acquired the shares afterwards by operation of law from a person who was a shareholder at that time. The Declaration of Trust further provides that a Fund shall be responsible for payment of attorneys’ fees and legal expenses incurred by a complaining shareholder only if required by law, and any attorneys’ fees that the Fund is obligated to pay shall be calculated using reasonable hourly rates. These provisions do not apply to claims brought under the federal securities laws.

The Declaration of Trust also requires that actions by shareholders against a Fund be brought exclusively in a federal or state court located within the State of Delaware. This provision will not apply to claims brought under the federal securities laws. Limiting shareholders’ ability to bring actions only in courts located in Delaware may cause shareholders economic hardship to litigate the action in those courts, including paying for traveling expenses of witnesses and counsel, requiring retaining local counsel, and may limit shareholders’ ability to bring a claim in a judicial forum that shareholders find favorable for disputes, which may discourage such actions.

UNDERLYING ISSUER INFORMATION

Information provided to or filed with the SEC by each of Underlying Security pursuant to the Exchange Act, including the financial statements of each such Underlying Security in its Form 10-K or Form 20-F, as applicable, can be located by reference to SEC file number noted below through the SEC’s website at www.sec.gov:

FINANCIAL HIGHLIGHTS

The Financial Highlights table is intended to help you understand the Fund's financial performance for the Fund's periods shown. Certain information reflects financial results for a single Fund share. The total return in the table represents the rate that an investor would have earned or lost on an investment in the Fund (assuming reinvestment of all dividends and distributions). This information has been audited by Cohen & Company, Ltd., the Fund's independent registered public accounting firm, whose report, along with the Fund's financial statements, is included in the Fund's Annual Certified Shareholder Report, which is available upon request.
